Do you wish your comments to be published on the website anonymously?	Yes
by submitting the planning application kirklees council have acknowledged that, FOR YEARS, the land [of which they own] has been causing flooding problams on the highway / fields/ ravenshall school playing fields,[being the lowest point], as the land does not absorb excess water hence forms a large pond. By developing this land and directing even more water to this lowest point , it will cause problams for residents when the proposed development drainage scheme is overun by excessive amounts of water flowing to this lowest point of the development, the lack of water absorbing trees/bushs in this particular large drainage area will not help either, the steel balstrude fencing of the relocated alloments will not soak up any excess water. This problam will need sorting out one way or another, development or no development, climate change has not helped and will only get worse, the problam of the land unable to absorbe the excess water at this point will only get worse
