The issue is this road has no pavements has no parking, communal parking spaces are only 3 spaces for ten houses. For visitors or workman to attend. If two of his employees are using these spaces that from 9am until 7pm when his delivery driver collects the medicine, vans are coming and going all day on this cul de sac. Residents have no pavements to walk on, residents visitors are unable to park as all day parking spaces are taken up. Now single track road cul-de-sac, how does it benefit the area all this traffic because of one house. Is this suitable. The whole situation doesn't seem make any sense. No planning for seven years, no parking for employees, no pavements for residents when all these deliveries are coming and going. Kids cant venture out for a walk without parents having to watch them as they have to walk on the road. The service strip outside his house is being used for deliveries to get dropped off. Long wheel base vans are coming. Its not suitable, it has never been suitable. Rose the company trying to make light of the dangers and inconvenience this is causing the residents. This application is not suitable regardless. Also Rose claim that the work is only in the garage. In the garden there is a permanent gazebo which is being used for the pharmacy works also. This road is not a double road, no pavements. Its like running the gauntlet with cars and families. Vans are coming and going all day. This is not helping the area or the community or improving living standards. Or beneficial to other local businesses. One house upsetting so many other residents. A commercial premises is suitable to this and will help the economy and not be of any danger to residents.
