s

I am concerned about the consultation response provided by KC Environmental Health (Pollution & Noise Control) with respect to the above planning application.

It seems like they have only reviewed the planning application but not reviewed the neighbour representations and supporting evidence. How can so much traffic generated by just one property in a quiet cul-de-sac not be a cause of concern with respect to pollution and noise? Have they done a site visit and listened to the noise generated? Surely the residents are more aware of the noise?

I can send you some sounds I have recorded on my phone.
