Cells in this table have been randomly adjusted to avoid the release of confidential data.

**Notes:** \* The living arrangements variable is different to marital status. It combines information from both marital status and the relationship matrix. Therefore a person living as part of a 'cohabiting couple' could in fact be married (to someone else) but will not appear as married or separated in this classification.

\*\* A person not living in a couple can be classified married (or re-married) if they denote their marital status as married (or re-married) but have no spouse or partner resident in the household.
