Appendix 2 Envirocheck Report
Coal Authority Report

1.0 EXECUTIVE SUMMARY

1. This report presents the findings of a Phase 1 carried out by Eastwood & Partners for and on behalf of Jaguar Estates and Wortley Developments. The site is located to the south of Queensgate in Huddersfield. It has an area of approximately 0.3 hectares and is centred on grid reference SK 1448, 1620.
2. The site has had an industrial use in the past, including a machine works, garage / petrol station and most recently retail use. The surrounding area has also had an industrial use, including various works and factories, since c1854, until the present day.
3. The ground conditions below the site are anticipated to comprise made ground over clay/sand, with the Middle Band Rock sandstone below this.
4. The Soft Bed Coal is anticipated to be present at around 14 m bgl and is expected to be around 0.6 m thick. There is expected to be sufficient cover above any workings within this seam, and remedial works such as drilling and grounding are not expected to be required. However, it may be prudent to carry out a borehole investigation to prove the depth and thickness of this seam.
5. The most appropriate foundation solution is likely to be strip or trench fill footings founded in undisturbed natural ground, or mass concrete pads for the apartment block. A minimum footing depth of 900 mm will probably be required.
6. Ground bearing floor slabs may be considered where there is less than 600 mm of made ground.
7. Sulphate precautions should be allowed for in all buried structures at this stage. Sulphate class DS-2 should be suitable however this will need to be confirmed by chemical testing.
8. Given the site's industrial history, there is potential for contamination to be present. It is considered that allowance should be made for at least 600 mm of clean capping in all gardens and areas of soft landscaping at this stage.
9. An intrusive investigation will be required to determine the near surface ground conditions. This should be done via trial pits or window samples. Samples of made ground and natural material should be taken and tested for chemical and geotechnical properties.
10. The conclusions made in this report are subject to agreement by the approving bodies and your warranty provider.

2.0 INTRODUCTION

2.1 Terms of Reference

This report presents the findings of a Phase 1 carried out by Eastwood & Partners (Consulting Engineers) Limited for, and on the instructions of Jaguar Estates and Wortley Developments.

2.2 Context

No other reports are known to exist for the site.

2.3 Aims and Objectives

The aims and objectives of this investigation were as follows.

- Assimilate Phase 1 data to derive an outline conceptual model identifying potential contaminants, pathways and receptors, as well as possible linkages between these; and
- Detail the expected ground conditions and their geotechnical properties enabling outline foundation proposals to be made for the proposed residential development.

2.4 Scope of Investigation

This document constitutes the findings of the Phase 1 desk study. This involved a review of information extracted from published documentation. Information regarding the current and former land uses both on and surrounding the site, as well as the environmental sensitivity of the site location as determined by factors including geology, hydrogeology and hydrology have been examined.

Information analysed in this section of the report has been obtained from a variety of sources and included the following:

- A Landmark Envirocheck report,
- A Coal Authority report, and
- Geological maps and associated geological memoirs.
- Environment Agency website 'What's in your backyard'
- Site Walkover

2.5 Limitations of Investigation

This report is based on the assumption that the site will be developed with a ground floor retail complex, below a 4 storey residential apartment block. The apartments will be for student accommodation. It is also proposed to construct thirteen private residential units. It is assumed that these will be of conventional construction and will be four storeys high. It is also assumed that that existing ground levels will not alter significantly. If this is not the case, then the advice given in this report may not be appropriate.

Where assessments of site areas affected in particular ways are given, these are approximate. All information, comments and opinions given in this report are based on the documentary information examined and the site visit.

This report was prepared for the sole and exclusive use of Jaguar Estates and Wortley Developments in response to particular instructions. Any other parties using the information contained in this report, unless given prior written approval to do so, do so at their own risk, and any duty of care to those parties is excluded.

3.0 THE SITE

3.1 Description

The site is located at 6 Queensgate near the centre of Huddersfield, West Yorkshire. It has an area of approximately 0.3 hectares and is centred on grid reference SK 1448, 1620 (414480, 416200). The site is roughly rectangular in plan shape with the north east boundary following the curve of Queensgate. Chapel Street bounds the site to the south.

The site is split level, with the northern section of site around 2-3 metres higher than the southern section. The car park in the north of the site has a gentle slope south towards the retail outlets, this is the largest of two car parks currently onsite. The other car park is located in the south eastern corner. Both are hard covered.

The rest of the site is occupied by retail outlets comprising a wine warehouse, pet shop and bath showroom. A separate building, an education centre, is located in the north west of the site. The lower, southern section of the retail building is lower than the northern section and is currently used as a gym. An electricity substation is located adjacent to the site's south western corner.

The site is surrounded by commercial and industrial development. Engineering works are located to the east of the site and to the south of Chapel Street, whilst the County Court is located to the west.

The 'Site Features Plan', drawing 36424/001 revision A, in Appendix 1, shows the features described.

3.2 History

Historical Ordnance Survey maps have been reviewed in the Envirocheck Report to assess the previous use of the site and surrounding area.

3.2.1 The Site

The earliest maps reviewed, dated around 1851, indicate the northern part of the site to be occupied by small buildings with landscaped areas/gardens to the rear. These were possibly residential in nature. By 1890, small units are indicated in the south east of the site, with a timber yard in the south west. East Parade Machine Works are also shown to the west of the site, with one of the buildings extending over the site boundary into the west of the site.

By 1918, the timber yard is no longer shown, and this area of the site is now covered by a rectangular building. The use of this is not indicated.

Little change is indicated on the site until 1960, when the building in the south of the site is labelled as being a garage. At this time, the residential units in the north of the site are still shown, but by 1962 they are removed and the garage has extended to the north, with a forecourt extending northwards to Queensgate. Anecdotal information records the possibility that part of the site was a fuel filling station in the past, and it is possible that the site is occupied by this use now. A square feature, possibly a canopy is shown on the maps from around the 1980s and 1990s. After this time, the canopy is not shown. The building configuration is not indicated to change up to the present day, but the garage was converted to use as the current shops at least 10 to 15 years ago.

3.2.2 The Surrounding Area

The 1893 Ordnance Survey map indicates the surrounding area to comprise residential and industrial properties. Central Iron Works is located to the south, with East Parade Machine Works to the west of site. A number of textile mills are located 250m south of the site and residential properties are shown to the north with various municipal buildings between the housing.

The 1907 map indicates Central Iron Works to have expanded. East Parade Machine Works is no longer labelled to the west of the site, although the buildings remain.

The 1918 map shows a timber yard now located immediately east of the site. Little change is indicated until between 1955 and 1960, when the timber yard east of the site was replaced by works buildings. The works to the south were also extended at this time. It is likely that the works were engineering works, which remain to the present day, although the maps from the 1970s and early 19+80s still label the buildings as Central Iron Works. The housing to the north of the site was replaced by industrial use buildings, including a laundry around 30m north of the site. A dairy and several small warehouses or factory's are also shown in this area.

The laundry, dairy and warehouses were removed by the early 1990s. a multi-storey car park replaced some of these features to the north east of the site. A new ring road, Queensgate, also removed some of the previous industrial buildings.

The maps do not indicate any significant changes to the layout of the development surrounding the site. However, many of the industrial buildings have been converted into residential apartments or commercial or office premises in more recent years.

3.3 Geology

The geological map of the area, Sheet 246 SE (1:10,560 scale), shows the site to be underlain by strata of the Lower Coal Measures. The Middle Band Rock Sandstone is indicated beneath the site.

The strata are generally indicated to dip towards the north east by the maps. There are no drift deposits shown on the site. There are no faults or other lines of weakness indicated to cross the site at surface.

Mudstone strata are indicated to outcrop to the south of the site. The Soft Bed Coal is also conjectured to outcrop around 110 m south of the site.

3.4 Hydrogeology

3.4.1 Groundwater Vulnerability

The Envirocheck Report states that the site overlies a Secondary A aquifer. These are defined as being permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers.

3.4.2 Groundwater Abstractions

The Envirocheck Report indicates there are six licenses for groundwater abstractions within 250 m of the site. The nearest abstraction point is located around 90m north west of the site. These are predominantly for general industrial use, or for cooling. The abstractions are generally not considered to be at significant risk from processes on the site.

3.5 Hydrology

The Envirocheck Report indicates the nearest surface water feature to be the Huddersfield Narrow Canal indicated as 92m south of the site boundary. Several positively drained roads are present between the site and the canal, and therefore a significant risk of contaminated surface water running off the site towards the canal is not anticipated.

3.6 Mining

The site is located on the edge of the Middle Band Rock Formation. This formation is indicated on the geological section to be around 7.6m above the Soft Bed Coal. The maximum thickness of this seam is recorded at Woodsome Colliery (Number 3 Shaft) as 'one feet seven inches' or 0.48m. Woodsome Colliery is located some 4.5 miles south east of the site.

A coal seam named as the Halifax Bottom Bed Coal was recorded at a depth of 20.7 m in a water well drilled around 75 m north west of the site. This is likely to be an alternative name for the Soft Bed Coal. The seam was recorded as being 0.6 m thick. Using this borehole data, the strata are indicated to dip at around 5°.

The geological map conjectures the Soft Bed Coal to outcrop around 110 m south of the site. Therefore, the seam may be expected at a depth of around 14 to 15 m below the site.

The geological memoir for the area records workings within the Soft Bed Coal in Lockwood, around 400 m south of the site, and describes the coal as being of good quality, varying between 0.5 m and 0.6 m thick.

It is generally accepted that remedial works are not required where there is more than ten times the extracted seam thickness of competent rock cover between the base of the workings and the underside of foundations. In this case, assuming a seam thickness of 0.6 m, then 6 m of competent rock would be required between the base of the Soft Bed Coal and the underside of foundations for drilling and grouting not to be required. This thickness of competent cover should be achieved, assuming that foundations are not more than around 2 to 3 m deep, and therefore remedial works should not be required.

A Coal Authority mining report has been obtained for the site and a copy is presented in Appendix 2. This states that the property is not within the likely zone of influence on the surface from past underground workings. However, the property is in an area where the Coal Authority believe there is coal at or close to the surface which may have been worked at some time in the past. We believe that this statement refers to the Soft Bed Coal at around 14 m bgl. There are no known coal mine entries within, or within 20 metres of the boundary of the property.

The site is not within an area where workings are currently being undertaken, or where it is proposed to begin coal extraction. The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

There is no record of a mine gas emission requiring action by the Coal Authority within the boundary of the property. No claims for alleged coal mining subsidence have been made on the site or within 50 m of the boundary.

We therefore consider that the site will not be at risk from shallow mining. However, given the relatively shallow depth at which the coal is expected, it may be prudent to confirm the depth and thickness of the seam by way of borehole investigation.

3.7 Ground Gas

Landfill Gas, Mine Gas and Radon

The Envirocheck report indicates there are no licensed waste management facilities within 250m of the site boundary. Therefore the site is not considered to be at risk from the migration of landfill gas.

Information provided within the Envirocheck report states that no radon protective measures are necessary.

3.8 Pollution Incidents to Controlled Waters

The Envirocheck Report indicates there are six recorded pollution incidents to controlled waters within 250m of the site boundary. They range in distance from 70m south of the site. These incidents include all category 2 or 3 incidents and are not expected to influence the site.

3.9 Discharge Consents

The Envirocheck report does not record any discharge consents within 250m of the site.

3.10 Flooding

The Envirocheck report indicates the site is not with a flood plain.

4.0 OUTLINE CONCEPTUAL MODEL

The following table details the possible sources and associated contaminants of concern, pathways and receptors, highlighted by the Phase 1 investigation as potentially present.

There is the possibility of chemical contamination on this site from the 150 years of heavy industry within and surrounding the site boundary. The contamination is likely to include metals and metalloids, PAHs, hydrocarbons (including total PAH's) and sulphates.

There is an electricity substation adjacent to the site's south western boundary therefore PCBs may have migrated onsite.

4.1 Potential Pollution Linkages

Source	Potential Contaminants	Potential Pathways	Potential Receptors
<ul style="list-style-type: none"> Made ground (from the adjacent heavy industries, namely, timber yard and iron works) 	<ul style="list-style-type: none"> Commonly encountered contaminants including: metals/metalloids, sulphates, asbestos, polycyclic aromatic hydrocarbons (PAH), and solvents. 	<ul style="list-style-type: none"> Ingestion, inhalation, direct contact 	<ul style="list-style-type: none"> Site workers, future residents Plants Concrete products Plastic water supply pipes
		<ul style="list-style-type: none"> Migration through ground 	<ul style="list-style-type: none"> Secondary A aquifer
<ul style="list-style-type: none"> Leakage of hydrocarbons (oil, petrol or diesel) from parked cars within the garage and or onsite storage tanks. 	<ul style="list-style-type: none"> Petroleum Hydrocarbons BTEX compounds 	<ul style="list-style-type: none"> Ingestion, inhalation, direct contact 	<ul style="list-style-type: none"> Site workers, future residents Plants Concrete products Plastic water supply pipes
		<ul style="list-style-type: none"> Migration through ground 	<ul style="list-style-type: none"> Secondary A aquifer
<ul style="list-style-type: none"> Naturally elevated concentrations of contaminants 	<ul style="list-style-type: none"> Naturally occurring contaminants such as arsenic, cadmium, chromium and sulphates 	<ul style="list-style-type: none"> Ingestion, inhalation, direct contact 	<ul style="list-style-type: none"> Site workers, future residents Concrete products
		<ul style="list-style-type: none"> Migration through ground 	<ul style="list-style-type: none"> Secondary A aquifer
<ul style="list-style-type: none"> Electricity Substation 	<ul style="list-style-type: none"> Polychlorinated Biphenyls (PCB's) 	<ul style="list-style-type: none"> Migration through ground, direct contact 	<ul style="list-style-type: none"> Site workers, future residents Concrete products Plastic water pipes

The site has been used as garage / petrol station for a number of years. It is possible that the underlying ground will have been contaminated with hydrocarbons from motor vehicles being serviced or parked within the site boundary. Additionally, fuel or oil tanks are likely to have been onsite either above or below ground. Prior to the garage / petrol station the site and surrounding area was occupied by the East Parade Machine Works, timber yards and other works buildings for many years. Contamination from these industries may also be present, which include lubricants, oils and timber treatments. An electricity substation is located close to the site's south western corner. PCB testing should be carried out on samples taken from this area to ascertain if PCBs have leaked from the transformers into the soils below.

4.2 Remediation

Significantly high levels of contamination are generally not generally expected, but could be present given the site's industrial past. At this stage it is considered that you make the following allowances for remediation:

- For removal of any underground tanks which may be present on the site. Some limited removal of the surrounding soils may also be required if significant leakage has occurred.
- For 600 mm of capping in all private gardens and areas of communal landscaping. Chemical testing of the ground may allow this thickness to be reduced in some area of the site.
- For sulphate precautions in below ground concrete. At this stage we recommend that Class 2 sulphate precautions are allowed for as a minimum. Chemical testing of soil samples may allow this to be downgraded. However, higher resistance concrete may also be required.

5.0 GEOTECHNICAL APPRAISAL

5.1 General

The ground conditions on site are anticipated to comprise a variable thickness of made ground, over sand or clay, overlying sandstone bedrock. There are no faults or lines of weakness within the site boundary or local surrounding area.

The bearing capacity of the clay is expected to be at least 100 kN/m², increasing with depth towards the bedrock.

5.2 Foundations

The most appropriate foundation solution for the proposed houses is likely to be strip or trench fill footings, constructed in undisturbed natural ground. A minimum footing depth of 900 mm will probably be required. Foundations will need to be deepened through any made ground which is present and deepened and constructed in accordance with NHBC standards within influencing distance of trees.

For the proposed student accommodation, strip or trench fill footings, or mass concrete pads are likely to be the most appropriate solution, again at a minimum depth of 900 mm bgl.

5.3 Ground Slabs

Ground bearing floor slabs may be appropriate where there is less than 600 mm of made ground. Reinforced suspended or precast concrete floors will be required otherwise.

5.4 Excavation Problems

The stability of any trenches may be poor in made ground encountered on the site. Support will be required in accordance with current Health & Safety Regulations wherever access is required to trenches deeper than 1.2 m or less where there is risk of collapse.

5.5 Obstructions

Foundations of the former industrial buildings may be encountered during redevelopment which may need to be broken out where they conflict with new structures. Bedrock may be present at relatively shallow depth which may cause local difficulty in deeper excavations.

The existing retaining wall between the two levels of the site is likely to be retained, and new foundations should be designed so as not to create any additional load on the structure.

5.6 Surface Water Drainage

The natural ground is expected to be clay over sandstone. Based on these ground conditions it is unlikely soakaways will be suitable for this site. In addition, given the limited footprint available, there is likely to be insufficient space in which soakaways can be constructed. If soakaways are to be considered permeability tests should be carried out. It is likely that the existing development is connected to the local sewer network, and it may be acceptable to retain this connection for use by the proposed buildings, subject to agreement by the regulators.

6.0 RECOMMENDATIONS FOR FURTHER WORK

Before more definite information regarding the properties of the ground and any contaminants present can be given, an intrusive ground investigation will be required. This will involve excavating trial pits on the site, or drilling window samples if trial pits are considered too disruptive to the current occupants of the site or the current surface finishes.

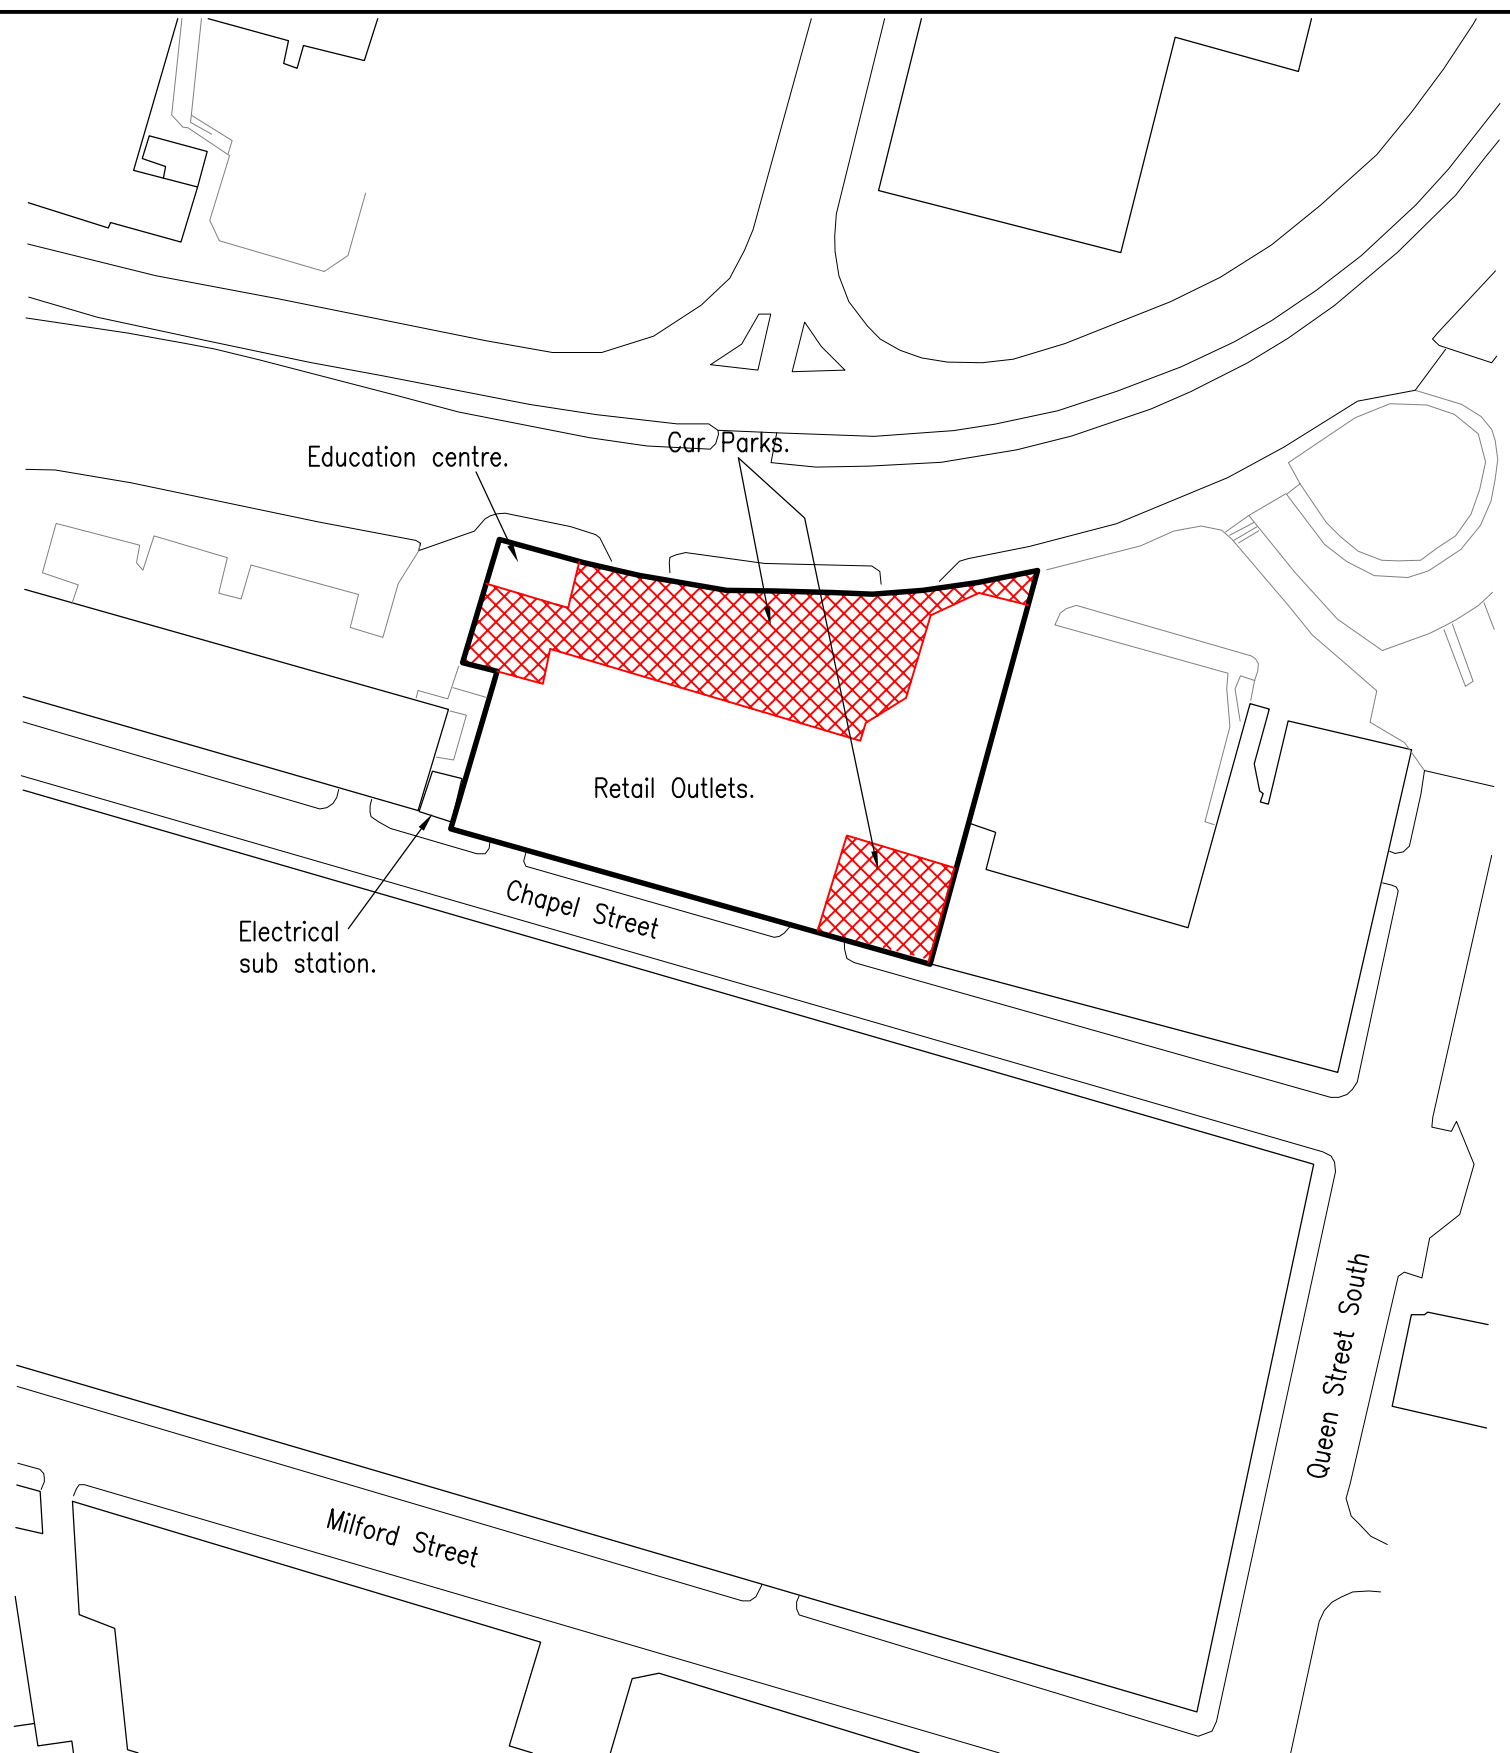

The Soft Bed Coal is expected below the site at relatively shallow depth at around 14 mbgl. This is not expected to influence developments on the site, but it may be prudent to undertake a borehole investigation to confirm the depth and thickness of the coal, and to prove whether workings have been undertaken in the past.

The potential pollutant linkages presented in the Outline Conceptual Model will need to be investigated by chemical analysis, using a suite relevant to the range of potential contaminants indicated.

Published 1851

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Yorkshire

Published 1890

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to complement the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Yorkshire
Published 1854
Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Batley

Published 1983

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 2006

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

Yorkshire

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1975

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.

For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

This report is for the property described in the address below and the attached plan.

Non-Residential Coal Authority Mining Report

6 QUEENSGATE, HUDDERSFIELD , WEST YORKSHIRE,

This report is based on and limited to the records held by, the Coal Authority, and the Cheshire Brine Subsidence Compensation Board's records, at the time we answer the search.

Coal mining	See comments below
Brine Compensation District	No

Information from the Coal Authority

Underground coal mining

Past

According to the records in our possession, the property is not within the zone of likely physical influence on the surface from past underground workings.

However the property is in an area where the Coal Authority believe there is coal at or close to the surface. This coal may have been worked at some time in the past.

Present

The property is not in the likely zone of influence of any present underground coal workings.

Future

The property is not in an area for which the Coal Authority is determining whether to grant a licence to remove coal using underground methods.

The property is not in an area for which a licence has been granted to remove or otherwise work coal using underground methods.

The property is not in an area that is likely to be affected at the surface from any planned future workings.

However, reserves of coal exist in the local area which could be worked at some time in the future.

No notice of the risk of the land being affected by subsidence has been given under section 46 of the Coal Mining Subsidence Act 1991.

Mine entries

There are no known coal mine entries within, or within 20 metres of, the boundary of the property.

Records may be incomplete. Consequently, there may exist in the local area mine entries of which the Coal Authority has no knowledge.

Coal mining geology

The Authority is not aware of any evidence of damage arising due to geological faults or other lines of weakness that have been affected by coal mining.

Opencast coal mining

Past

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

Present

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

Future

The property is not within 800 metres of the boundary of an opencast site for which the Coal Authority is determining whether to grant a licence to remove coal by opencast methods.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres, since 31st October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

There is no record of a mine gas emission requiring action by the Coal Authority within the boundary of the property.

Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Authority, under its Emergency Surface Hazard Call Out procedures.

Withdrawal of support

The property is not in an area for which a notice of entitlement to withdraw support has been published.

The property is not in an area for which a notice has been given under section 41 of the Coal Industry Act 1994, revoking the entitlement to withdraw support.

Working facilities orders

The property is not in an area for which an Order has been made under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

Payments to owners of former copyhold land

The property is not in an area for which a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Comments on Coal Authority information

In view of the mining circumstances a prudent developer would seek appropriate technical advice before any works are undertaken.

Therefore if development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply good engineering practice developed for mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or mines of coal without the permission of the Coal Authority. Developers should be aware that the investigation of coal seams/former mines of coal may have the potential to generate and/or displace underground gases and these risks both under and adjacent to the development should be fully considered in developing any proposals. The need for effective measures to prevent gases entering into public properties either during investigation or after development also needs to be assessed and properly addressed. This is necessary due to the public safety implications of any development in these circumstances.

Information from the Cheshire Brine Subsidence Compensation Board

The property lies outside the Cheshire Brine Compensation District.

Additional Remarks

This report is prepared in accordance with the Law Society's Guidance Notes 2006, the User Guide 2006 and the Coal Authority and Cheshire Brine Board's Terms and Conditions 2006.
