Section 1 INTRODUCTION

Planning permission was granted on the 31st may 2013 for the erection of single and two storey classrooms under application reference 2013/62/90670/W. This significant school development project sought to improve the existing school facilities for the existing pupils and ensure the school had the facilities to arrest the decline in pupils numbers. In detail it sought consent for:

- Encapsulation and recladding of the existing duplex building with dining room to the rear of the main Listed Building on the site.
- The removal of 3 temporary buildings on the site comprising 6 classrooms, one of which is located to the front of the Listed Building on the main open space and the other two are located within an open area to the north of the site. These would be replaced with a new purpose built single and single storey and a half building in the same location as two of the portacabins and would form a dedicated pre-prep facility for the school along with 3 general teaching spaces required of an art room, a science lab and an ICT suite.

The school has been delighted that the investment made has arrested the decline in pupil numbers and the school roll and that the school has regained its pupil numbers.

However, it has now become apparent that with the school roll full all space within the buildings has been utilized and the existing Sports Pavilion building within the site is no longer adequate in size terms to meet the changing and sporting needs of pupils.

To meet this sporting need it is proposed to replace the existing timber sports pavilion, which lies to the south of the grass pitch area set in front of the Listed School Building and to the north of the all weather playground area which is used as an all weather pitch. This existing sports pavilion is around 46 sq m in size. The enlarged sports pavilion with serve the entire sports area, but is located outside any pitch area is to be around 114 sq m. It will not adversely impact on sports pitch provision but the facilities will maximize the ability to use the pitches for their maximum potential by pupils within the school.

This Statement has been prepared to meet the guidance within Department for Communities and Local Government (DCLG) Circular 01/06, Guidance on Changes to the Development Control System as well as the Guidance contained within CABE's "Design and Access Statements, How to write, read and use them" (2006).

This statement provides the planning justification for the proposed development having regard to National Planning Policy, the Development Plan and other material considerations.

It also deals with the Design Statement as well as Inclusive Access and links together the supporting background documents, which accompany this application.

This Planning, Design and Access Statement demonstrates that the re-provision, enhancement and improvement of the existing sports pavilion will be a positive gain for Kirklees Council, its residents, the overall community and that it would not adversely impact on the surrounding area.

This Statement sets out the following:

- Section 2 describes the background context of Cognita Schools Ltd.
- Section 3 describes the site and surrounding area.
- Section 4 sets out the relevant planning policy framework.
- Section 5 provides the justification for planning permission.
- Section 6 discusses access arrangements.
- Section 7 provides the conclusions.

Section 2 BACKGROUND CONTEXT

Huddersfield Grammar School was founded in 1995, though based on the traditions of two former independent schools.

The school believes that education should not be regarded simply as a series of hurdles, but as a whole life experience. Ultimately, through academic results are important, a well balanced, confident individual who has been educated in the truest sense will be a happy and productive member of society.

Teaching at all levels is always in small classes with up to 20 pupils per class. Many classes are often smaller, especially at GCSE level. Consequently the happy, disciplined atmosphere of the School and individual attention means that all pupils reach excellent academic standards. Huddersfield Grammar School has an enviable reputation for academic success.

Class sizes are limited in number so that each child is known as an individual with unique needs and talents. The aim is to develop those talents and to meet the needs of the children.

Cognita, owner of Huddersfield Grammar School, was formed in 2004. The company employs over 2,900 teachers and support staff in 56 schools across the UK and international schools in Brazil, Spain, Singapore, Vietnam and Thailand. There are over 15,200 pupils on the roll of these schools. The schools fit a broad profile, including Pre-Prep, Prep and Senior Schools.

Cognita's vision is to own and manage a family of independent schools, each of which enjoys an excellent reputation within its community. Each school's reputation will grow as a result of consistently meeting the aspirations that parents have for their child's education. Their child will be happy and enthusiastic about the school. The school will be seen to invest in its relationship with individual parents and it will be recognised as keen to nurture a culture that treats parents as customers.

The Group will implement three key strategies in all its schools, in order to deliver this vision. It will:

- Protect, preserve and develop the atmosphere, ethos and culture of each school so that it promotes its own identity
 - Recruit, retain and develop very good teachers in order to provide the very best education. It will therefore recruit and retain the best head teachers, invest in regular and appropriate staff development programmes, develop programs to support, measure, review and reward excellent
-

performance, foster best practice initiatives between schools and departments, implement regular internal quality control reviews that audit education delivery and performance, and invest in the development and maintenance of a broad and balanced curriculum.

- Develop excellent communications between the school and its parents through frequent and routine communications, easy access to information, the provision of easy access of staff at all levels, regular forums including staff and parents, the promotion of schemes to encourage parental involvement, programs that adopt appropriate technologies.

The group will exercise four unique sources of competitive advantage in developing these strategies. The Group:

- Maintains a staff of leading educationalists, who are very successful and experienced in education, in teaching and in the development of schools
- Is run by professional management, who have broader business skills than are to be found in most schools
- Has access to funds for the development of people, organisation, facilities and systems infrastructure
- Enjoys the benefits of scale of being a large group. It employs a large cadre of excellent teachers, able to exchange best practice experiences, it is financially robust

and it can deliver savings and efficiencies through its support services

School objectives

Set against this background, the school's objectives are:

EDUCATIONAL

- To maintain the School's excellent standing and remain competitive
- To improve the standard of education and educational facilities provided by the School
- To provide the facilities required following stemming the fall in pupil numbers and bringing the school back to a full roll
- To reinvest income to ensure the future viability of the School

FUNCTIONAL AND ENVIRONMENTAL

- To improve the operational efficiency of the school by rationalising functional arrangements
- To respect the setting of the Listed Building
- To respect the important landscape setting of the school
- To create a facility that harmonises with the existing building fabric

To achieve this the school requirements are:

To replace the existing sports pavilion building with a new sports pavilion building to meet the school roll and to provide facilities to match the sporting curriculum both required and endorsed by the school.

This will add to the latest 2014 OFSTED report comment on sporting provision from 2014 'A broad range of sporting activities is enjoyed by pupils, both within the planned curriculum and through use of local sports facilities. Pupils speak with enthusiasm about the sporting opportunities that they have. The school has established a range of team games for boys and girls against other local schools, as well as those within the Cognita Group, for example in football, netball and swimming. Such features of the sports provision are reflected in the wide range of external links established by the school, which also support pupils' wider academic and personal development'.

The proposals are to provide the correct pavilion and changing accommodation for the school as it is now and to move forward to exceed OFSTED requirements in terms of sporting provision and excellence.

This statement seeks to justify the proposals:

- a) Demonstrating the requirement for the proposals and how they respect and enhance the Listed Building and sylvian setting of the site.
- b) Providing the requirement of facilities for the school in this location.

Section 3 THE SITE AND SURROUNDING AREA

Huddersfield Grammar School is located within a secluded location at Royds Mount in Luck Lane in Lindley, a township of Huddersfield and approximately 1.5 miles west of the centre of Huddersfield. The house is sited within its own grounds to the east of Luck Lane. The National Grid Reference for the house is: SE 12413 16807.

Huddersfield Grammar School was until c.1940 a private Victorian house (Royds Mount) set in its own grounds. The house, with its stable and coachhouse block were built around 1867 for James Crosland, a local woollen mill owner.

Around c.1940 the house and grounds became a private school, St. David's Preparatory School under the ownership of Mrs Wilson. In 1995 the school amalgamated with Central (Kayes) College to form Huddersfield Grammar School.

The house was listed at Grade II in 1978, the buildings significance is reflected in its listing. Listed Buildings are considered to be local and historic interest and account for approximately 373,000 buildings or structures in England. Listed buildings are listed by English Heritage on behalf of the Secretary of State, and protected by legislation under the Planning (Listed Buildings and Conservation Areas) Act 1990.

Luck Lane comprises a mix of different types of residential properties and forms a radial route between Jim Lane and Fir Road and the school entrance is opposite Link Road.

To the north of the site on Gorse Road and Rose Avenue there are mainly semi-detached residential properties.

To the rear (east) of the site are detached houses in Wellfield Road and Wyvern Avenue, while to the south is open playing field land.

The site contains a range of buildings including the main listed school building, the former stables, the senior block and the hall as well as a range of newly constructed replacement school buildings.

Section 4 PLANNING POLICY FRAMEWORK

The Development Plan provides the statutory policy framework against which planning applications should be made. Decisions should normally be made in accordance with the development plan unless material considerations indicate otherwise. Other material considerations such as National Policy Guidance may be taken into account in reaching decisions.

The Development Plan for the Borough presently comprises the Kirklees Council adopted UDP Saved Policies and the emerging Local Plan set out through the Local Development Framework.

National Policy Framework

National Planning Policy Framework (March 2012)

The NPPF sets out clearly the rational and aim of sustainable development in paragraph 7, namely:

- an economic role – contributing to building a strong, responsive and competitive economy, by ensuring that sufficient land of the right type is available in the right places and at the right time to support growth and innovation; and by identifying and coordinating development requirements, including the provision of infrastructure;

- a social role – supporting strong, vibrant and healthy communities, by providing the supply of housing required to meet the needs of present and future generations; and by creating a high quality built environment, with accessible local services that reflect the community's needs and support its health, social and cultural well-being; and
- an environmental role – contributing to protecting and enhancing our natural, built and historic environment; and, as part of this, helping to improve biodiversity, use natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change including moving to a low carbon economy.

And in paragraph 14 it emphasises that at the heart of the NPPF is a **presumption in favour of sustainable development**, which should be seen as a golden thread running through both plan making and decision taking. This means approving development proposals that accord with the development plan without delay.

Through paragraphs 29 to 41 it sets out the promotion of sustainable transport, and advises on the need for Travel Plans for significant generators while in paragraph 32 it advises that 'development should only be refused on transport grounds where the residual cumulative impacts of development are severe'.

Section 7 through paragraphs 56 to 68 sets out the importance of understanding site context and good design. In paragraph 61 it emphasises the need of planning policies and decisions to ‘address the connections between people and places and the integration of new development into the natural, built and historic environment’.

Through section 8 it promotes healthy communities in paragraphs 69 to 78. Paragraph 72 advises that ‘the Government attaches great importance to ensuring that a sufficient choice of school places is available to meet the needs of existing and new communities. Local planning authorities should take a proactive, positive and collaborative approach to meeting this requirement, and to development that will widen choice in education. They should:

- give great weight to the need to create, expand or alter schools; and
- work with schools promoters to identify and resolve key planning issues before applications are submitted’.

While paragraph 73 advises ‘Access to high quality open spaces and opportunities for sport and recreation can make an important contribution to the health and well-being of communities. Planning policies should be based on robust and up-to-date assessments of the needs for open space, sports and recreation facilities and opportunities for new provision. The assessments should identify specific needs and

quantitative or qualitative deficits or surpluses of open space, sports and recreational facilities in the local area. Information gained from the assessments should be used to determine what open space, sports and recreational provision is required’.

Paragraph 74 explains ‘existing open space, sports and recreational buildings and land, including playing fields, should not be built on unless:

- an assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements; or
- the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location; or
- the development is for alternative sports and recreational provision, the needs for which clearly outweigh the loss’.

Section 11 of the NPPF sets out the guidance on conserving and enhancing the natural environment. Through paragraphs 109 to 125 it seeks to protect flora and fauna with ‘opportunities to incorporate biodiversity in and around developments should be encouraged’, while ensuring no adverse air quality or noise issues arise.

Lastly, section 12 sets out the position in relation to conserving and enhancing the historic environment through paragraphs 126 to 141.

Through paragraph 131 it advises that in determining planning applications, local planning authorities should take account of:

- the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation;
- the positive contribution that conservation of heritage assets can make to sustainable communities including their economic vitality; and
- the desirability of new development making a positive contribution to local character and distinctiveness.

Kirklees Council Unitary Development Plan and Local Development Framework

The emerging Local Plan is not at an advanced enough state to merit weight in the determination process, while it is also recognised that the Kirklees UDP is significantly out of date in terms of age, and therefore at variance with the advice in paragraph 12 of the NPPF. However, since it is broadly in accordance with the NPPF in relation to the actual development proposals contained within the application it is still a material determining factor.

UDP

Greenspace

Policy D3 advises on sites designated as urban greenspace planning permission will not be granted unless the development proposed:

- I is necessary for the continuation or enhancement of established uses or involves change of use to alternative open land uses, or would result in a specific community benefit, and, in all cases, will protect visual amenity, wildlife value and opportunities for sport and recreation; Or
- II includes alternative provision of urban greenspace equivalent in both quantitative and qualitative terms to that which would be developed and reasonably accessible to existing users.

Through paragraph 2.13 it advises:

Some areas of urban greenspace contain buildings, usually school premises set within playing fields. Factors such as school reorganisation may render these buildings partly or wholly redundant. In these circumstances a change of use or redevelopment to accommodate purposes not associated with open land uses will be appropriate,

provided that the use and quality of the associated open land could be safeguarded or enhanced. It would not, therefore, normally be appropriate to increase significantly the area covered by buildings or car parking’.

Policy D4 advises that the change of use or redevelopment of redundant buildings located within designated urban greenspace for purposes not associated with open land uses will normally be permitted provided that the use and quality of the associated open land will be safeguarded.

Natural Environment

The UDP advises that Development proposals provide many opportunities for building-in beneficial biodiversity or geological features as part of good design. When considering proposals, local planning authorities should maximise such opportunities in and around developments, using planning obligations where appropriate.

Policy NE9 advises development proposals should normally retain any mature trees within the application site. Where development is approved on sites containing mature trees no construction, including changes in levels, drainage works and the formation of access roads will be permitted within the crown spread of trees unless it can be demonstrated that satisfactory precautions will be taken to ensure their continued viability

Built Environment

The key built environment policies are identified below:

Policy BE1 advises ‘all development should be of good quality design such that it contributes to a built environment which:

- i Creates or retains a sense of local identity;
- ii Is visually attractive;
- iii Promotes safety, including crime prevention and reduction of hazards to highway users;
- iv Promotes a healthy environment, including space and landscaping about buildings and avoidance of exposure to excessive noise or pollution;
- v Is energy efficient in terms of building design and orientation and conducive to energy efficient modes of travel, in particular walking, cycling and use of public transport’.

While Policy BE2 advises ‘new development should be designed so that:

- i It is in keeping with surrounding development in respect of design, materials, scale, density, layout, building height or mass;
- ii The topography of the site (particularly changes in level) is taken into account;
- iii Satisfactory access to existing highways can be achieved; and

- iv Existing and proposed landscape features (including trees) are incorporated as integral part of the proposal.

Conservation

These policies were not saved due to repetition of guidance with the former PPG15, now replaced with the NPPF. Paragraph 3.8 of the UDP advises that 'generally the best way of securing the upkeep of historic buildings and areas is to keep them in active use. For the great majority this must mean economically viable uses if they are to survive, and new, and even continuing, uses will often necessitate some degree of adaptation. The range and acceptability of possible uses must therefore usually be a major consideration when the future of listed buildings or buildings in conservation areas'.

Noise

Policy EP4 advises 'proposals for noise sensitive development in proximity to existing sources of noise, or for noise generating uses of land close to existing noise sensitive development, will be considered taking into account the effects or projected noise levels on the occupiers of the existing or proposed noise sensitive development'.

Transport

With regard to transport Policy T1 advises 'priority will be given to:

- i Satisfying the needs of all sections of the community through an effectively integrated transport system with emphasis on improving public transport and encouraging a modal shift away from travel by private car;
- ii Promoting a transport network on which it is safe to travel and which causes minimal disturbance through danger, noise and air pollution; and
- iii Co-ordinating land use changes with transport provision so as to minimize the need to travel and locating new development where it can be best served by public transport and where it minimises the need for expanding of the highway network'.

Education

The UDP is silent in relation to the benefits that school providers can bring in terms of school roles, employment provision both existing and future and also the role future pupils will play in society.

Having run through in detail the emerging and evolving planning policy position to understand the material considerations, it is now considered appropriate to focus in on each of the issues, and how these policies would relate to the proposals before the Local Planning Authority.

Section 5 JUSTIFICATION FOR PLANNING

Planning permission was granted on the 31st may 2013 for the erection of single and two storey classrooms under application reference 2013/62/90670/W. This significant school development project sought to improve the existing school facilities for the existing pupils and ensure the school had the facilities to arrest the decline in pupils numbers. In detail it sought consent for:

- Encapsulation and recladding of the existing duplex building with dining room to the rear of the main Listed Building on the site.
- The removal of 3 temporary buildings on the site comprising 6 classrooms, one of which is located to the front of the Listed Building on the main open space and the other two are located within an open area to the north of the site. These would be replaced with a new purpose built single and single storey and a half building in the same location as two of the portacabins and would form a dedicated pre-prep facility for the school along with 3 general teaching spaces required of an art room, a science lab and an ICT suite.

The school has been delighted that the investment made has arrested the decline in pupil numbers and the school roll and that the school has regained its pupil numbers.

However, it has now become apparent that with the school roll full all space within the buildings has been utilized and the existing Sports Pavilion building within the site is no longer adequate in size terms to meet the changing and sporting needs of pupils.

To meet this sporting need it is proposed to replace the existing timber sports pavilion, which lies to the south of the grass pitch area set in front of the Listed School Building and to the north of the all weather playground area which is used as an all weather pitch. This existing sports pavilion is around 46 sq m in size. The enlarged sports pavilion will serve the entire sports area, but is located outside any pitch area is to be around 114 sq m. It will not adversely impact on sports pitch provision but the facilities will maximize the ability to use the pitches for their maximum potential by pupils within the school.

Education, Employment and Opportunity

The NPPF sets out clearly the rational and aim of sustainable development in paragraph 7, namely:

- an economic role – contributing to building a strong, responsive and competitive economy, by ensuring that sufficient land of the right type is available in the right places and at the right time to support growth and innovation; and by identifying and coordinating development requirements, including the provision of

infrastructure;

- a social role – supporting strong, vibrant and healthy communities, by providing the supply of housing required to meet the needs of present and future generations; and by creating a high quality built environment, with accessible local services that reflect the community's needs and support its health, social and cultural well-being; and
- an environmental role – contributing to protecting and enhancing our natural, built and historic environment; and, as part of this, helping to improve biodiversity, use natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change including moving to a low carbon economy. This proposal meets all three key determining criteria to be supported.

It provides a present and future economic role not just for teachers at the school but future employment for pupils when they leave school. By investing in a larger and improved sports pavilion for pupils we lay the foundations for a fully educated and fully active workforce in the future, thereby driving the economic success of the economy. By providing the right facilities for pupils it allows them to develop and to reach their full potential.

The school provides a crucial role in educating pupils on their roles and responsibilities and guides them on the path to adulthood and society.

The school supports strong, vibrant and healthy communities and by providing the right buildings and accommodation through a high quality built environment it meets the community's needs.

The replacement sports pavilion has been sited on the same area as the existing building, not only to preserve the setting of the Listed Building but also this is the most appropriate area for the sports pavilion. It is outside the outdoor sports pitches area but set adjacent and between them and it can serve all the pitches the school has to both the north and south of the building. The replacement building has had full regard to the environmental role, both historic and natural and would not affect flora and fauna and would preserve and enhance the Listed Building. It is to be constructed of sustainable red cedar and follows the design principles and style of the existing pavilion and will blend in well to the existing landscape setting.

It also meets the key requirement of paragraph 72 on which the **'Government attaches great importance to ensuring that a sufficient choice of school places is available to meet the needs of existing and new communities. Local planning authorities should take a proactive, positive and collaborative approach to meeting this requirement, and to development that would widen choice in education. They should:**

‘give great weight to the need to create, expand or alter schools’.

Crucially, it also meets the emphasises at the heart of the NPPF that there is a **‘presumption in favour of sustainable development**, which should be seen as a golden thread running through both plan making and decision taking. **This means approving development proposals that accord with the development plan without delay’.**

Greenspace

Huddersfield Grammar School is well established with a school being on the site since 1940. The school has been a good guardian of the site in maintaining and enhancing its sylvan landscape character and this overall landscape is an important attribute to the school, and one, which the school wishes to protect and enhance. The recent building works have been undertaken at a significant investment cost but they have stemmed the pupil decline and have brought the pupil roll back up to its historic levels, which the school has been delighted with. On the back of this the current sports pavilion is not large enough, nor does it provide the correct facilities for the school now it has a full roll and a replacement and larger sports pavilion is required.

The school is located within Urban Greenspace. Policy D3 in the Unitary Development Plan states *‘On sites designated as Urban Greenspace planning permission will not be granted unless the development proposed:*

- 1. is necessary for the continuation or enhancement of established uses or involves a change of use to alternative open land uses, or would result in specific community benefit, and, in all cases, will protect visual amenity, wildlife value and opportunities for sport and recreation; or*
- 2. includes alternative provision of Urban Greenspace equivalent in both quantitative and qualitative terms to that which would be developed and reasonably accessible to existing users’.*

Policy D4 advises that the change of use or redevelopment of redundant buildings located within designated urban greenspace for purposes not associated with open land uses will normally be permitted provided that the use and quality of the associated open land will be safeguarded.

The existing Sports Pavilion has been within the site since around the 1950's and lies to the south of the grassed pitch area in front of the main school and to the north of the playground / all weather pitch to the south. Its replacement and enlargement was considered carefully in light of Sport England's advice on the previous application *"that the school rightly makes available its sports hall and football and rugby league pitches for community sports clubs to use. While the new school building will be positioned to the north of the site in an area of generic open space, we can confirm this area is not capable of supporting a pitch and is detached from the main school playing field. We would raise no objection to such a scheme as it would have no impact on a sports facility or an area capable of being used for sport"*. They also note that reinstatement of the playing field through removal of the portacabin will *"enable reorientation of a football pitch to a better north south position. This would ensure the pitch is less affected by the impact of the sun"*. The school will re-orientate this pitch and will follow Sport England guidance in Natural Turf for Sport 2011.

It is considered that the sports pavilion in this location will not impact on any pitch provision and its increased size will allow the pitches use to be maximised through pupils within the school. In policy terms it complies with the provision of Policies D3 and D4 of the Saved Policies of the UDP.

With regard wildlife value this is dealt with below under its own heading.

Wildlife / Biodiversity / Trees

The Tree Survey submitted for application 2013/90670 for the whole site advises on the condition and recommends good arboricultural management for the trees within the site.

The existing sports pavilion is within a sylvan setting between two well spaced groups of trees. Likewise the proposed red cedar sports pavilion will also be set within this gap area and its placement on the land within this will not impact on any outer route or branch spread of any trees.

Branch and route protection zones can be conditioned and would be agreed with Kirklees Council prior to any commencement of development. The proposal would accord with Policy NE9 on retention of trees within the UDP.

Wildlife and biodiversity is recognised particularly in urban areas as a key requirement for balanced and sustainable environments. Through paragraphs 109 to 125 of the NPPF it seeks to protect flora and fauna with "opportunities to incorporate biodiversity in and around developments that should be encouraged".

This development has the opportunity to significantly increase the overall bio-diversity through the site with the introduction of bat and swift boxes on both the trees and on the sports pavilion. This can form an important learning tool for the pupils as well as enhancing the natural environment.

As part of any planning permission we would welcome a condition on the planning permission advising of the need to carry out a detailed assessment and to provide the suggested measures. By undertaking this it will also confirm compliance with UDP Policy D3.

Sustainability

Through the NPPF sustainability is a key and material consideration.

The proposed presents the opportunity to upgrade and replace an existing timber building estimated to have been constructed in the 1950's, with a modern cedar clad replacement sports pavilion.

By providing this it will contribute to tackling climate change by minimising carbon dioxide emissions, adopting sustainable design and construction measures.

Historic Building

Storah Architecture was commissioned to produce a Conversation

Management Plan for the Huddersfield Grammar School complex for application 2013/90670 to assess the significance and guide the development of options for the site. This suite of documents is as relevant to the previous application as to the present application and has guided the assessment of where to locate the sports pavilion.

The Conservation Statement categorises the house, curtilage buildings, and the landscape with differing levels of 'significance' (historic importance). The various elements are scored according to the significance of each room or element (exceptional, high, medium, low, none). In considering works, the significance of an area or element should be taken into account. There should be a presumption in favour of developing or changing areas of lesser significance where possible.

The existing sports pavilion is considered to be of low significance and this is clearly detailed within the report and assessment. Therefore, to replace it with a sympathetic replacement is considered to be acceptable and set within this location away from and separated from the Listed Building or the open elements of the site through the existing trees is considered an appropriate historic and design solution. Storah Architecture consider the proposals to meet both UDP and NPPF guidance as preserving or enhancing the Listed Building.

Design

Good design is central to all objectives of the NPPF and is specifically promoted by the policies contained within Chapter 7, which address both general design principles and specific design issues. The UDP sets out the key built environmental policies through Policy BE1 and BE2 which seek to retain local identity, provide attractive buildings and ensure it is within the materials, scale, density and character of the area.

The building reflects the surroundings and the use of wood reflects the values and materials of the site. Likewise the height, scale massing and how the buildings sit within the topography of the site is appropriate.

Secured By Design

The existing building is secure and the replacement building requires no extra features. Cognita Schools Ltd have many years experience in ensuring high quality and secure design for its students.

No external CCTV cameras are proposed.

The proposal is considered to provide a safe and secure environment and to meet the key proposals in Secured by Design.

Transport and Parking

Transport guidance is set out through the NPPF and the UDP Policy T1 which advises 'priority will be given to:

- i Satisfying the needs of all sections of the community through an effectively integrated transport system with emphasis on improving public transport and encouraging a modal shift away from travel by private car;
- ii Promoting a transport network on which it is safe to travel and which causes minimal disturbance through danger, noise and air pollution; and
- iii Co-ordinating land use changes with transport provision so as to minimize the need to travel and locating new development where it can be best served by public transport and where it minimises the need for expanding of the highway network'.

The Transport Assessment with Travel Plan Framework prepared by i-Transport met the requirements of the last application. This proposal is not to increase pupil numbers and merely seeks a replacement and appropriately sized sports pavilion to service the pupils sporting requirements within the site.

Servicing / Service Management Strategy

The servicing and delivery will be in accordance with existing arrangements. No additional servicing or waste requirement will be required as a result of this development.

Refuse and Recycling

There is a significant body of guidance on waste through the NPPF, which supersedes PPS10: Planning for Sustainable Waste. The NPPF and saved UDP policies require the minimisation of waste, the increase in the re-use and recycling and composting of waste, and the reduction in the amount of waste disposed at landfill.

Refuse and Storage already exists and is adequate for the school and no extra provision is required. The provision will remain as existing for the school both in terms of quantity and location of facilities, as will waste uplift.

Noise

National Guidance is set out through the NPPF and Building Bulletin 93 'Acoustic Design of Schools', BB10 'Ventilation in School Buildings',

while more local guidance is set out in the UDP Policy EP4. These seek to control and minimise noise and disturbance.

This building seeks to replace the existing sports pavilion which does not meet current Building Control standards and are not double glazed.

The proposed building will exceed Part L of the Building regulations, having both double glazing and full insulation as well as meeting Building Bulletin 93 requirements. The building will have no plant or air conditioning and so will not generate any external noise sources.

Section 6 INCLUSIVE ACCESS

Policy on inclusive access is set out through the NPPF, Planning and Access for Disabled People: a good practice guide (ODPM) as well as UDP Policy G5 which requires ‘development proposals should have regard to equality of opportunity in terms of access to buildings and open space facilities and other relevant aspects of design, including the provision of ancillary facilities’.

These policies supplement building regulations and require all future development to meet the highest standards of accessibility and inclusion.

This Planning, Design and Access Statement explains how the principles of inclusive design have been incorporated into the scheme, as are the accesses and egress points and the paths to and from the building and open space.

Access to the proposed replacement sports pavilion will utilise existing routes within the site and no new routes are proposed. Access into the building will be via DDA compliant ramp and all doors and will be DDA width.

The entire internal layout has been designed to ensure inclusive access. The site, including its layout and the buildings will be fully DDA compliant

(Disability Discrimination Act 1998), with level access obtained to the building and within each floor of the building.

Pedestrian

The existing pedestrian routes to and from the building will not be altered through this proposal.

Disabled

The proposed sports pavilion building will be accessible by disabled/wheelchair users.

The proposals will comply with Part M of the Building Regulations and also with BS 8300:2001 ‘Design of buildings and their approaches to meet the needs of disabled people – Code of Practice’.

Section 7 CONCLUSIONS

Planning permission was granted on the 31st may 2013 for the erection of single and two storey classrooms under application reference 2013/62/90670/W. This significant school development project sought to improve the existing school facilities for the existing pupils and ensure the school had the facilities to arrest the decline in pupils numbers. In detail it sought consent for:

- Encapsulation and recladding of the existing duplex building with dining room to the rear of the main Listed Building on the site.
- The removal of 3 temporary buildings on the site comprising 6 classrooms, one of which is located to the front of the Listed Building on the main open space and the other two are located within an open area to the north of the site. These would be replaced with a new purpose built single and single storey and a half building in the same location as two of the portacabins and would form a dedicated pre-prep facility for the school along with 3 general teaching spaces required of an art room, a science lab and an ICT suite.

The school has been delighted that the investment made has arrested the decline in pupil numbers and the school roll and that the school has regained its pupil numbers.

However, it has now become apparent that with the school roll full all space within the buildings has been utilized and the existing Sports Pavilion building within the site is no longer adequate in size terms to meet the changing and sporting needs of pupils.

To meet this sporting need it is proposed to replace the existing timber sports pavilion, which lies to the south of the grass pitch area set in front of the Listed School Building and to the north of the all weather playground area which is used as an all weather pitch. This existing sports pavilion is around 46 sq m in size. The enlarged sports pavilion with serve the entire sports area, but is located outside any pitch area is to be around 114 sq m. It will not adversely impact on sports pitch provision but the facilities will maximize the ability to use the pitches for their maximum potential by pupils within the school.

Education, Employment and Opportunity

The NPPF sets out clearly the rational and aim of sustainable development in paragraph 7, namely; an economic role, a social role and an environmental role. This proposal meets these three key requirements as well as meeting the key requirement of paragraph 72 on which the **'Government attaches great importance to ensuring that a sufficient choice of school places is available to meet the needs of existing and new communities. Local planning authorities should**

take a proactive, positive and collaborative approach to meeting this requirement, and to development that would widen choice in education. They should:

‘give great weight to the need to create, expand or alter schools’.

Crucially, it also meets the emphasises at the heart of the NPPF that there is a **‘presumption in favour of sustainable development**, which should be seen as a golden thread running through both plan making and decision taking. **This means approving development proposals that accord with the development plan without delay’.**

Greenspace

The existing Sports Pavilion has been within the site since around the 1950's and lies to the south of the grassed pitch area in front of the main school and to the north of the playground / all weather pitch to the south. Its replacement and enlargement was considered carefully in light of Sport England's advice on the previous application

“that the school rightly makes available its sports hall and football and rugby league pitches for community sports clubs to use. While the new school building will be positioned to the north of the site in an area of generic open space, we can confirm this area is not capable of supporting a pitch and is detached from the main school playing field. We would raise no objection to such a scheme as it would have no impact on a sports facility or an area capable of being used for sport”.

They also note that reinstatement of the playing field through removal of the portacabin will *“enable reorientation of a football pitch to a better north south position. This would ensure the pitch is less affected by the impact of the sun”.* The school will re-orientate this pitch and will follow Sport England guidance in Natural Turf for Sport 2011.

It is considered that the sports pavilion in this location will not impact on any pitch provision and its increased size will allow the pitches use to be maximised through pupils within the school. In policy terms it complies with the provision of Policies D3 and D4 of the Saved Policies of the UDP.

Wildlife/Biodiversity/Trees

The Tree Survey submitted for application 2013/90670 for the whole site advises on the condition and recommends good arboricultural management for the trees within the site.

The existing sports pavilion is within a sylvan setting between two well spaced groups of trees. Likewise the proposed red cedar sports pavilion will also be set within this gap area and its placement on the land within this will not impact on any outer route or branch spread of any trees.

This development has the opportunity to significantly increase the overall bio-diversity through the site with the introduction of bat and swift boxes on both the trees and on the sports pavilion. This can form an important learning tool for the pupils as well as enhancing the natural environment.

As part of any planning permission we would welcome a condition on the planning permission advising of the need to carry out a detailed assessment and to provide the suggested measures. By undertaking this it will also confirm compliance with UDP Policy D3.

Sustainability

Through the NPPF sustainability is a key and material consideration.

The proposed presents the opportunity to upgrade and replace an existing timber building estimated to have been constructed in the 1950's, with a modern cedar clad replacement sports pavilion.

By providing this it will contribute to tackling climate change by minimising carbon dioxide emissions, adopting sustainable design and construction measures.

Historic Building

The Conservation Statement categorises the house, curtilage buildings, and the landscape with differing levels of 'significance' (historic importance). The various elements are scored according to the significance of each room or element (exceptional, high, medium, low, none). In considering works, the significance of an area or element should be taken into account. There should be a presumption in favour of developing or changing areas of lesser significance where possible.

The existing sports pavilion is considered to be of low significance and this is clearly detailed within the report and assessment. Therefore, to replace it with a sympathetic replacement is considered to be acceptable and set within this location away from and separated from the Listed Building or the open elements of the site through the existing trees is considered an appropriate historic and design solution. Storah Architecture consider the

proposals to meet both UDP and NPPF guidance as preserving or enhancing the Listed Building.

Design

Good design is central to all objectives of the NPPF and is specifically promoted by the policies contained within Chapter 7, which address both general design principles and specific design issues. The UDP sets out the key built environmental policies through Policy BE1 and BE2 which seek to retain local identity, provide attractive buildings and ensure it is within the materials, scale, density and character of the area.

The building reflects the surroundings and the use of wood reflects the values and materials of the site. Likewise the height, scale massing and how the buildings sit within the topography of the site is appropriate.

Secured By Design

The existing building is secure and the replacement building requires no extra features. Cognita Schools Ltd have many years experience in ensuring high quality and secure design for its students.

No external CCTV cameras are proposed.

The proposal is considered to provide a safe and secure environment and to meet the key proposals in Secured by Design.

Transport and Parking

The Transport Assessment with Travel Plan Framework prepared by i-Transport met the requirements of the last application. This proposal is not to increase pupil numbers and merely seeks a replacement and appropriately sized sports pavilion to service the pupils sporting requirements within the site.

Servicing / Service Management Strategy

The servicing and delivery will be in accordance with existing arrangements. No additional servicing or waste requirement will be required as a result of this development.

Refuse and Recycling

There is a significant body of guidance on waste through the NPPF, which supersedes PPS10: Planning for Sustainable Waste. The NPPF and saved UDP policies require the minimisation of waste, the increase in the re-use and recycling and composting of waste, and the reduction in the amount of waste disposed at landfill.

Refuse and Storage already exists and is adequate for the school and no extra provision is required. The provision will remain as existing for the school both in terms of quantity and location of facilities, as will waste uplift.

Noise

National Guidance is set out through the NPPF and Building Bulletin 93 'Acoustic Design of Schools', BB10 'Ventilation in School Buildings', while more local guidance is set out in the UDP Policy EP4. These seek to control and minimise noise and disturbance.

This building seeks to replace the existing sports pavilion, which does not meet current Building Control standards and are not double glazed.

The proposed building will exceed Part L of the Building regulations, having both double glazing and full insulation as well as meeting Building Bulletin 93 requirements. The building will have no plant or air conditioning and so will not generate any external noise sources.

Inclusive Access

The proposal complies with the policies on inclusive access as set out through the NPPF.

In conclusion, these proposals seek to replace the existing sports pavilion with a new fit for purpose cedar timber sports pavilion building for the current school roll.

It will provide for the continued education of the pupils and will be a positive gain for the Borough.
