

Good afternoon, the applicant has no intention of making any structural changes to the original building either internal or external.

The only building work required is to erect a removable partition between lobby from staff area to surgery room adjoining, to allow access through to reception and similar construction to block up door opening in other surgery on ground floor leading to the basement.

The proposed work will not be detrimental to the existing structures and easily removed without damaging the existing structures.

I trust that this information meets with your requirements

Regards
Barry Caldicott
