

EnviroSmart Plus

Site address	Site to the rear of Market Place Slaithwaite Huddersfield HD7 5AW
Site coordinates	407910, 414000
Report prepared for	Mr. G Soor 19-21 Station Road Staithwaite Huddersfield HD7 5AW
Report reference	63283R1
Report status	Final
Date issued	September 2016
Report author	Johnathan Green Land consultant
Report check & review	Rob Gordon Principal consultant

Report summary: contaminated land risks

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contaminated land hazards which may be present at the study site.

As such, potential contaminated land risks have been assessed by considering two key items:

1. The likelihood that **sources of contamination** are present within the sub surface beneath the site. This gives a measure of the potential for contamination to be occurring at the site.
2. The **consequence or severity of any impacts** should contamination be present. The consequence or severity of impact is inferred from the nature of any **potential receptors** (i.e., something that could be adversely affected by a contaminant, such as people, an ecological system, property or a water body) as well as any **relevant pathways** (i.e., a route or means by which a receptor can be exposed to or affected by a contaminant) relating to the site and the surrounding area.

The assessment findings are summarised as follows:

1. Probability/likelihood of contamination being present at the Site	High likelihood	
	Likely	
	Low likelihood	
	Unlikely	
2. Potential severity/consequence of any impacts	Severe	
	Medium	
	Mild	
	Minor	
3. Overall land quality risks posed by the Site	Very high	
	High	
	Moderate	
	Moderate/low	
	Low	
	Very low	

Risk Key

Very High	High	Moderate	Moderate/Low	Low	Very Low
There is a high probability that severe harm could arise to a designated receptor from an identified hazard without appropriate remediation action	Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remediation action	It is possible that without appropriate remediation action harm could arise to a designated receptor. It is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely any harm would be mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely that, at worst if any harm was realised any effects would be mild	The presence of an identified hazard does not give rise to the potential to cause harm to a receptor

It is acknowledged that the risk assessment findings are based on documentary sources of information alone. Typically a proportionate programme of intrusive site investigations would be required to fully verify these findings.

Recommendations (for next steps)

✓	No immediate action but observe a watching brief	It is noted that whilst a limited intrusive site investigation (including appropriate laboratory testing of soil samples) could be adopted in order to validate the preliminary risk assessment conclusions, a watching brief during all proposed redevelopment activities and associated ground works (which would include a thorough inspection of any exposed sub surface soils/Made Ground) would likely be sufficient.
✓	FloodSmart GW report	Given that the Site is located within a high groundwater flood risk area we recommend that a FloodSmart GW report is undertaken.

GeoSmart would be delighted to provide further information and a site specific quotation in relation to the above recommendations.

Please contact info@geosmartinfo.co.uk for further advice.

1. Introduction

1.1 Background

The study site (from herein known as 'the Site') is situated to the rear of Market Place in Slaithwaite, Huddersfield. A location plan of the Site is shown in Section 1.5. A proposed development plan of the Site is shown in Section 1.6.

GeoSmart was commissioned by Mr. G Soor in September 2016 to undertake a Phase 1 Land Quality Assessment for the Site. The report has been requested by Kirklees Council in order to satisfy Planning Application Reference 2013/62/92051/W.

The proposed development is for the conversion of the current storage building to form three residential apartments.

The EnviroSmart report has been undertaken by firstly compiling information concerning the Site and the surrounding area, including current and historical land uses, geological records and registered pollution incidents. The information which is gathered is then used to construct a 'conceptual site model', including an understanding of likely contaminant sources, pathways and receptors. Finally, a preliminary assessment of risks posed to identified receptors (i.e., people, buildings or the natural environment) from the anticipated land quality at the Site is performed. The risk assessment methodology is consistent with CIRIA C552 (2001); see Section 3.4 for details.

1.2 Purpose of this report

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contamination hazards which may be present at the Site.

1.3 Report contents

This report is divided into two sections, as described below:

Section	Content	Purpose
Section 2: LAND QUALITY ASSESSMENT	A summary of the site history and environmental setting, the findings of the preliminary risk assessment and associated recommendations	To present a clear and concise overview of the land quality issues facing the Site, including recommendations of how to manage any land contamination which may be present
Section 3: SUPPORTING INFORMATION	A collection of site specific information on which the land quality assessment is based	To provide detailed information in support of the risk assessment; this section also represents a source of reference data for use in any subsequent site works/assessments

1.4 Report limitations

It is noted that the findings presented in this report are largely based on information supplied by third parties. Whilst we assume that all information is representative of past and present conditions we can offer no guarantee as to its validity.

This report excludes consideration of potential hazards arising from any activities at the Site other than normal use and occupancy for the intended land uses. Hazards associated with any other activities have not been assessed and must be subject to a specific risk assessment by the parties responsible for those activities.

1. Introduction

1.5 Site location plan

1. Introduction

1.6 Proposed site development plan

2. Land quality assessment

2.1 Site details

Site name:	Site to the rear of Market Place	Current land cover:	Storage building and hard standing
Current use:	Storage building		
Proposed use:	Residential flats	Site area:	0.04 ha

2.2 Conceptual understanding (potential sources of contamination)

 Site history (historical land use taken within 250m radius of the Site boundary)	Date	Description of land use	POTENTIAL SOURCES OF CONTAMINATION	Source description	LOW LIKELIHOOD	PROBABILITY OF CONTAMINATION
	1892-1906	The north of the Site is developed with a long rectangular structure which appears to be the current Site structure. A commercial type structure located c.90 m to the south west is labelled as a stone works. A railway track is located c.100 m to the north of the Site. Woollen mills are located c.80 m to the south, c.130 m to the east, c.160 m south west and c.180 m to the east of the Site. A old quarry is located c.220 m to the north west of the Site. The land c.250 m to the east of the Site is labelled as a gas works with two large gas holders.		The land use history suggests that there is the potential for contamination to have occurred on-Site relating to the following:		
	1932	There is no apparent change to the Site. Tanks are located c.130 m to the east of the Site adjacent to an industrial/commercial type building. A dye works is located c.140 m and a chemical works c.210 m to the south east.		Storage of fuels and/or miscellaneous chemicals.		
	1968	The Site structure appears to have been separated into four separate properties. The previously mentioned dye works is no longer mapped and the land is now occupied by a large structure which is separated into two different mills. Further mills are located c.100 m to the west and c.200 m to the south west of the Site. A chemical works is located c.250 m to the north west of the Site.		Miscellaneous small scale fuel and chemical spills.		
	1982-1983	There is no apparent change to the Site. The previously mentioned Mill located c.200 m to the south west of the Site has been extended and is now located c.140 m from the Site at the closest point.		Potential for localised deposition of boiler ash/coke and other industrial combustion wastes and by-products.		
	1993-1994	There is no apparent change to the Site.		Made Ground associated with former development/demolition activities.		
	2002-2009	Aerial imagery shows the Site appears unchanged.		Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings.		

2. Land quality assessment

2.2 Conceptual understanding (potential sources of contamination)

 Current land use	The Site is currently used as a storage building. There are no known buried storage tanks at the Site. There is no known bulk fuel or chemical storage on Site. Additional information concerning the current Site condition is presented in Section 2.5 (site walkover information).	POTENTIAL SOURCES OF CONTAMINATION	The Site's current use is unlikely to have given rise to significant land contamination.	UNLIKELY																																									
 Neighbouring industrial land uses (see environmental data report in Section 3.3 for full listing)	One or more potentially contaminative land uses are located within 250 m of the Site, including: Printing & Advertising Solutions UK (active) Ltd c.40 m north west - printers G R T Services (inactive) c.50 m south west – French polishing Micks Auto Services (inactive) c.70 m south west - garage services Shawfleet (inactive) c.75 m east - road haulage services Sybro Spinning (inactive) c.95 m south - textile manufacturing Union Parts (active) c.140 m north - nuts, bolts & fixings N I S Building Supplies (inactive) c.160 m south east - builders' merchants N.I.S. Recovery Services (inactive) c.180 m south east - garage services Pennine Farm Services (active) c.180 m south east - agricultural engineers R & D Boothroyd Ltd (active) c.180 m south east - precision engineers D & B Injection Moulders Ltd (active) c.180 m east - plastics - injection moulding Brook & France Ltd (inactive) c.200 m south west - plastics - rubber & plastic products - manufacturers Salamander Fabrications Ltd (active) c.200 m south west - sheet metal work Northern Interstate (inactive) c.220 m south east - car breakdown & recovery services Cole & Wilson Ltd (active) c.230 m west - chemical manufacturers <table><thead><tr><th>Nr</th><th>Nearest distance</th><th>Land use / permitted activity / authorisation</th></tr></thead><tbody><tr><td>0</td><td>NA</td><td>Fuel station entries</td></tr><tr><td>0</td><td>NA</td><td>Gas pipelines</td></tr><tr><td>0</td><td>NA</td><td>Underground electrical cables</td></tr><tr><td>0</td><td>NA</td><td>Control of major accident hazards sites (COMAH)</td></tr><tr><td>0</td><td>NA</td><td>Notification of installations handling hazardous substances (NIHHS)</td></tr><tr><td>0</td><td>NA</td><td>Explosives sites</td></tr><tr><td>0</td><td>NA</td><td>Planning hazardous substance consents</td></tr><tr><td>0</td><td>NA</td><td>Planning hazardous substance enforcements</td></tr><tr><td>0</td><td>NA</td><td>Sites determined as Contaminated Land under Part IIA of the Environmental Protection Act 1990</td></tr><tr><td>0</td><td>NA</td><td>Records of Licensed Discharge Consents.</td></tr><tr><td>0</td><td>NA</td><td>Local Authority pollution prevention and control sites</td></tr><tr><td>3</td><td>105 m</td><td>Local Authority pollution prevention and control enforcements</td></tr><tr><td>0</td><td>NA</td><td>Records of Category 3 or 4 Radioactive Substance Licences</td></tr></tbody></table>		Nr	Nearest distance	Land use / permitted activity / authorisation	0	NA	Fuel station entries	0	NA	Gas pipelines	0	NA	Underground electrical cables	0	NA	Control of major accident hazards sites (COMAH)	0	NA	Notification of installations handling hazardous substances (NIHHS)	0	NA	Explosives sites	0	NA	Planning hazardous substance consents	0	NA	Planning hazardous substance enforcements	0	NA	Sites determined as Contaminated Land under Part IIA of the Environmental Protection Act 1990	0	NA	Records of Licensed Discharge Consents.	0	NA	Local Authority pollution prevention and control sites	3	105 m	Local Authority pollution prevention and control enforcements	0	NA	Records of Category 3 or 4 Radioactive Substance Licences	The potentially contaminative land uses/activities identified in close vicinity of the Site may pose a contamination hazard to the Site should relevant contaminant pathways exist.

PROBABILITY OF CONTAMINATION

2. Land quality assessment

2.2 Conceptual understanding (potential sources of contamination)					
 EA recorded pollution incidents	One or more Environment Agency pollution incidents have been recorded within 250 m of the Site. These include: An incident occurred in 1995 c.75 m to the east of the Site. This included a unknown pollutant. Minor impacts to water were recorded. An incident occurred in 1991 c.85 m to the south of the Site. This included a spillage of soap. Minor impacts to water were recorded. An incident occurred in 1991 c.90 m to the south of the Site. This included a spillage of oil. Minor impacts to water were recorded. An incident occurred in 1993 c.125 m to the south east of the Site. This included a unknown pollutant. Minor impacts to water were recorded. An incident occurred in 1992 c.130 m to the south east of the Site. This included a unknown pollutant. Minor impacts to water were recorded.	POTENTIAL SOURCES OF CONTAMINATION	Given the scale, timing, location and nature of the recorded incidents these past events do not appear to pose a significant contamination hazard to the Site.	UNLIKELY	PROBABILITY OF CONTAMINATION
	There are no Environment Agency listed historical landfills located within 500 m of the Site. There are no Environment Agency listed operational landfills located within 500 m of the Site. There are no Local Authority listed historical landfills located within 500 m of the Site. The following other waste sites are registered within 500 m of the Site: 0 Records of registered waste transfer sites. 0 Records of registered waste treatment or disposal sites. 0 Records of licenced waste management facilities.		Given the absence of any historical or operational landfills within close proximity of the Site no associated contamination hazards have been identified. Given the absence of any waste treatment, transfer or disposal sites within close proximity of the Site no associated contamination hazards have been identified.	NEGLIGIBLE	
	 Rn Radon		<1% of homes are at or above the UK radon action level (200 Bq/m3).	UNLIKELY	

2. Land quality assessment

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)					
 Geology and Groundwater (see the environmental data report in Section 3.3 for full details)	British Geological Survey mapping indicates the absence of any superficial deposits beneath the Site. British Geological Survey mapping indicates that the bedrock geology consists of Readycon Dean Flags, which comprises of sandstone and is classified as a Secondary (A) Aquifer. According to the GeoSmart Groundwater Flood Risk (GW5) Map (GeoSmart, 2016). The risk of groundwater flooding at the Site is 'moderate'. The Site does not lie within a Source Protection Zone (SPZ). The following groundwater abstraction licences are held within 1 km of the Site: - One general use abstraction is located c.350 m to the south west of the Site - One general industrial abstraction is located c.645 m to the north east of the Site - One farming and domestic abstraction is located c.925 m to the south east of the Site	POTENTIAL RECEPTORS	A Secondary (A) Aquifer comprises permeable layers capable of supporting water supply at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. Based on the susceptibility of the Site to groundwater flooding, a groundwater flood risk assessment should be considered for the Site. The depth to groundwater beneath the Site is unknown. The presence of one or more groundwater abstraction licences within close proximity of the Site indicates a reasonable groundwater resource potential.	MEDIUM	POTENTIAL SEVERITY OF IMPACT
	 Geohazards The Site does not lie within a 'Coal Mining Reporting Area'. There are no brine affected areas within 75 m of the Site. No or limited artificial ground / Made Ground is anticipated on Site. The following natural hazards are present at or within 50 m of the Site: Compressible ground deposits		The Site does not lie within an identified coal mining area and is therefore unlikely to be affected by related ground stability or mine gas issues. The Site does not lie within an area of former brine working and is therefore unlikely to be affected by related ground stability issues. The Site has moderate hazard rating for compressible ground deposits at or within 50 m of the Site, as such consideration should be given to this hazard as part of the redevelopment plans.		

2. Land quality assessment

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)					
 Surface water (see the environmental data report in Section 3.3 for full details)	The nearest water feature is a canal located c.20 m from the Site boundary. The Site does not lie within a flood risk zone. The following surface water abstraction licences are held within 1 km of the Site: General use abstractions are located c.150 m south west, c.205 m south east, c.215 m south west, c.350 m south west and c.480 m north of the Site. Industrial use abstractions are located c.800 m north and c.920 m east of the Site.	POTENTIAL RECEPTORS	The relatively close proximity of the identified surface water feature(s) suggests that a potential linkage could occur if any contamination were present on Site. However, it is noted that the canal would likely be lined which may limit the likelihood of a contaminant pathway.	MILD	POTENTIAL SEVERITY OF IMPACT
 Environmental designations (see the environmental data report in Section 3.3 for full details)	There are no environmentally sensitive land uses within 500 m of the Site.		No relevant environmentally designated sites/receptors have been identified.	NEGLIGIBLE	
 Human receptors	Proposed residents/users of the Site plus neighbouring residences.		Human receptors are proposed to be present on Site.	SEVERE	

2. Land quality assessment

2.4 Regulator perspective		
Consultation date	27/09/16	Kirklees Council
GeoSmart consultant	Johnathan Green	Contaminated land Team
Consultation outcome	The Council did not respond to GeoSmart within the time frame of this report.	

2. Land quality assessment

2.5 Site inspection (see photographs in section 3.2)			
Inspection date	27/09/2016	General site condition	Good
GeoSmart consultant	Pete York	Site contact	Mr. G Soor
Topography	The Site slopes down gradually from the building in the north of the Site towards the road adjacent to the south of the Site.	Ground cover	The Site is completely hard standing. Comprising of the building cover and cobbled/paved external area. Some vegetation is noted on the Site growing between the cobble paving on the surface.
Current site land use	The Site is occupied and used for storage of materials related to the owners business (i.e. at the time of the walkover safes, filling cabinets and office furniture were being stored in the Site building).	On-Site structures	A single large, rectangular building is located towards the north of the Site. The building appears in good condition and is constructed of stone with a slate roof.
Visual / olfactory evidence of contamination	No visual or olfactory evidence of any on site contamination was observed during the site walkover	On site drainage	A surface water drain cover is located on road to the south of the Site. Rainwater from the building is discharged directly to the ground surface. A row of three manhole covers are located along the south of the Site building and a fifth near to the southern Site boundary.
Bulk storage tanks (fuel and chemical storage)	No direct evidence of any bulk fuel or chemical storage was observed during the site walkover	Invasive species	No direct evidence of any invasive species was observed during the site walkover

2. Land quality assessment

2.5 Site inspection (see photographs in section 3.2)				
Neighbouring land uses	North	Residential	Off-site contaminant sources	No visual or olfactory evidence of any off site contamination was observed during the site walkover
	South	Residential properties and offices are located across a cobbled yard.		
	East	Retail premises.		
	West	Public house.		
Local water features	No evidence of any surface water features was observed within the immediate vicinity of the site during the site walkover		Distance to nearest residential property	The nearest residential accommodation is currently located < 5 m to the north of the site boundary.

2. Land quality assessment

2.6 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
On-Site sources								
1	Potential for inorganic and low volatility organic contaminants to be present within the subsurface soils	Dermal contact, soil & soil dust ingestion, inhalation of soil dust	HH	Current/future site occupants	MEDIUM	UNLIKELY	LOW RISK	Given the proposed presence of hard standing across the entire Site, no routine exposure to any subsurface contamination is considered likely.
2		Consumption of home grown produce	HH	Current/future site occupants	MEDIUM	UNLIKELY	LOW RISK	
3		Ingress into water supply pipework and subsequent water ingestion	HH	Current/future site occupants	MEDIUM	UNLIKELY	LOW RISK	
4		Building materials in direct contact with aggressive ground	PROP	Current/future site buildings	MEDIUM	UNLIKELY	LOW RISK	Aggressive ground conditions are not anticipated.
5		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Readycon Dean Flags (a Secondary (A) Aquifer)	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	The risk classification reflects the local groundwater sensitivity (moderate resource value)
6		Dissolution into pore water/shallow groundwater and subsequent lateral migration	CW	Canal	MILD	LOW LIKELIHOOD	LOW RISK	The risk classification reflects the close proximity of the surface water feature. However, it is noted that water quality in the canal is likely to be poor and that it would likely be lined and therefore the presence of a contaminant linkage from the Site is uncertain.
7		Dissolution into aqueous phase and preferential migration via drainage structures	CW	Canal	MILD	LOW LIKELIHOOD	LOW RISK	

2. Land quality assessment

2.6 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
8	Potential for volatile organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Current/future site occupants	MEDIUM	UNLIKELY	LOW RISK	Given the proposed presence of hard standing across the entire Site, no routine exposure to any subsurface contamination is considered likely.
9		Consumption of home grown produce	HH	Current/future site occupants	MEDIUM	UNLIKELY	LOW RISK	
10		Ingress into water supply pipework and subsequent water ingestion	HH	Current/future site occupants	MEDIUM	UNLIKELY	LOW RISK	
11		Migration of vapours to surface; inhalation indoors	HH	Current/future site occupants	MEDIUM	UNLIKELY	LOW RISK	It is plausible that the source mass associated with any volatile contaminants that were originally present on-Site may have been significantly reduced due to the effects of volatilisation and degradation.
12		Migration of vapours to surface; inhalation outdoors	HH	Current/future site occupants	MEDIUM	UNLIKELY	LOW RISK	
13		Building materials in direct contact with aggressive ground	PROP	Current/future site buildings	MEDIUM	UNLIKELY	LOW RISK	Aggressive ground conditions are not anticipated.
14		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Readycon Dean Flags (a Secondary (A) Aquifer)	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	The risk classification reflects the local groundwater sensitivity (moderate resource value)
15		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Canal	MILD	LOW LIKELIHOOD	LOW RISK	The risk classification reflects the close proximity of the surface water feature. However, it is noted that water quality in the canal is likely to be poor and that it would likely be lined and therefore the presence of a contaminant linkage from the Site is uncertain.
16		Dissolution into aqueous phase and preferential migration via drainage structures	CW	Canal	MILD	LOW LIKELIHOOD	LOW RISK	

2. Land quality assessment

2.6 Preliminary Risk Assessment								
Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
17	Potential for asbestos containing materials within the subsurface soils	Liberation of sub surface ACMs and inhalation of asbestos fibres	HH	Current/future site occupants	MEDIUM	UNLIKELY	LOW RISK	Given the proposed presence of hard standing across the entire Site, no routine exposure to any subsurface contamination is considered likely.
18	Potential for dissolved phase contaminants to be present within shallow groundwater	Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Readycon Dean Flags (a Secondary (A) Aquifer)	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	The risk classification reflects the local groundwater sensitivity (moderate resource value)
19		Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Canal	MILD	LOW LIKELIHOOD	LOW RISK	The risk classification reflects the close proximity of the surface water feature. However, it is noted that water quality in the canal is likely to be poor and that it would likely be lined and therefore the presence of a contaminant linkage from the Site is uncertain.
20	Potential for elevated methane to be present within the subsurface soils	Lateral and vertical migration into on site buildings; potential to cause an explosion	HH	On site properties and their occupants	MEDIUM	UNLIKELY	LOW RISK	The gas generation potential of on site materials is considered to be limited.
21		Lateral migration towards off site buildings; potential to cause an explosion	HH	Off site properties and their occupants	MEDIUM	UNLIKELY	LOW RISK	
22	Potential for elevated carbon dioxide to be present within the subsurface soils	Lateral and vertical migration into on site buildings; potential to cause asphyxiation	HH	Occupants of on-site buildings	MEDIUM	UNLIKELY	LOW RISK	
23		Lateral migration towards off site buildings; potential to cause asphyxiation	HH	Occupants of off-site buildings	MEDIUM	UNLIKELY	LOW RISK	
24	Potential for radon within the subsurface	Lateral migration towards on site buildings; potential to cause long term health effects	HH	Occupants of on-site buildings	MEDIUM	UNLIKELY	LOW RISK	The Site lies in an area where <1% of homes are at or above the UK radon action level (200 Bq/m3).
OVERALL RISK RATING							MODERATE/LOW RISK	

2. Land quality assessment

2.7 Next steps			
✓	No immediate action but observe a watching brief		Given the known history of the Site it is considered unlikely that significant contamination is present within the sub-surface. Furthermore, given that the proposed development comprises hard standing across the entire Site, the preliminary risk assessment suggests that the risks posed by in situ land quality to human health is therefore likely to be low/moderate. It is noted that whilst a limited intrusive site investigation (including appropriate laboratory testing of soil samples) could be adopted in order to validate the preliminary risk assessment conclusions, a watching brief during all proposed redevelopment activities will likely be sufficient. The watching brief should be maintained throughout the entire development phase of works and any possible evidence of contamination encountered during the redevelopment works should be alerted to the Local Authority. Appropriate actions would then be required to further inspect, sample and analyse any suspect materials, and formulate an appropriate remediation plan, as necessary.
2.8 Other recommendations			
✓	FloodSmart GW report		Given that the Site is located within a moderate groundwater flood risk area we recommend that a FloodSmart GW report is undertaken; our FloodSmart GW reports are able to provide a quantified estimate of groundwater flood risk, and we will work with our associates to design mitigation measures that will minimise risk to your property and possessions. Please contact info@geosmartinfo.co.uk for further information and a site specific quotation.

GeoSmart Information Ltd is registered with the Property Codes Compliance Board (PCCB) as a subscriber to the Search Code. The PCCB independently monitors how registered search firms maintain compliance with the Code.

The Search Code

- provides protection for homebuyers, sellers, estate agents, conveyancers and mortgage lenders who rely on the information included in property search reports undertaken by subscribers on residential and commercial property within the United Kingdom
- sets out minimum standards which firms compiling and selling search reports have to meet
- promotes the best practice and quality standards within the industry for the benefit of consumers and property professionals
- enables consumers and property professionals to have confidence in firms which subscribe to the code, their products and services.
- By giving you this information, the search firm is confirming that they keep to the principles of the Code. This provides important protection for you.

The Code's core principles

Firms which subscribe to the Search Code will:

- display the Search Code logo prominently on their search reports
- act with integrity and carry out work with due skill, care and diligence
- at all times maintain adequate and appropriate insurance to protect consumers
- conduct business in an honest, fair and professional manner
- handle complaints speedily and fairly
- ensure that products and services comply with industry registration rules and standards and relevant laws
- monitor their compliance with the Code

Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award compensation of up to £5,000 to you if he finds that you have suffered actual loss as a result of your search provider failing to keep to the Code.

Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPOs or to the PCCB.

3. Supporting information

Important consumer protection information

GeoSmart Information Limited is registered with the Property Codes Compliance Board as a subscriber to the Search Code. A key commitment under the Code is that firms will handle any complaints both speedily and fairly.

If you want to make a complaint, we will:

- Acknowledge it within 5 working days of receipt.
- Normally deal with it fully and provide a final response, in writing, within 20 working days of receipt.
- Keep you informed by letter, telephone or e-mail, as you prefer, if we need more time.
- Provide a final response, in writing, at the latest within 40 working days of receipt.
- Liaise, at your request, with anyone acting formally on your behalf.

The Code's core principles

Firms which subscribe to the Search Code will:

- display the Search Code logo prominently on their search reports
- act with integrity and carry out work with due skill, care and diligence
- at all times maintain adequate and appropriate insurance to protect consumers
- conduct business in an honest, fair and professional manner
- handle complaints speedily and fairly
- ensure that products and services comply with industry registration rules and standards and relevant laws
- monitor their compliance with the Code

If you are not satisfied with our final response, or if we exceed the response timescales, you may refer the complaint to The Property Ombudsman scheme (TPOs): Tel: 01722 333306, E-mail: admin@tpos.co.uk.

We will co-operate fully with the Ombudsman during an investigation and comply with his final decision.

Complaints should be sent to:

Lisa Davies

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

3. Supporting information

3.4 Risk assessment methodology

The method of risk evaluation adopted in this document is consistent with CIRIA C552 (2001). Hence, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with this contamination.

The classification system used to define contaminant probability, consequence and risk is described in the following tables.

Table A: Classification of probability

Classification	Definition
High likelihood	There is a contaminant linkage and an event that appears either very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a contaminant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term, and likely over the long term.
Low likelihood	There is a contaminant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is contaminant linkage but circumstances are such that it is improbable that an event would occur even in the long term.

Table B: Classification of consequence

Classification	Receptor	Definition	Examples
Severe	Humans	Short-term (acute) risk to human health likely to result in "significant harm" as defined in the CTL Statutory Guidance	High concentrations of cyanide on the surface of an informal recreation area
	Controlled waters	Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource	Major spillage of contaminants from site into controlled water
	Property	Catastrophic damage to buildings/property	Explosion, causing building collapse (can also equate to an acute human health risk if buildings are occupied)
	Ecology	A short-term risk to a particular ecosystem, or organism forming part of such eco-system	Potentially long term derogation of a designated site or protected species
Medium	Humans	Chronic damage to human health ("significant harm" as defined in the CTL Statutory Guidance)	Concentrations of a contaminant from a residential site exceed the site-specific assessment criteria
	Controlled waters	Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution)	Leaching of contaminants from a site to a principal or secondary aquifer
	Property	Significant damage to crops, buildings, structures and services	Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability)
	Ecology	A significant change in a particular ecosystem	Death of a species within a designated nature reserve

3. Supporting information

Table B: Classification of consequence (continued)

Classification	Receptor	Definition	Examples
Mild	Humans	Contamination present although unlikely to constitute a significant chronic health risk	Concentrations of a contaminant from a public access site moderately exceed the generic assessment criteria
	Controlled waters	Pollution of non-water resources	Pollution of non-classified groundwater
	Property	Damage to sensitive buildings/structures/services	Aggressive ground conditions leading to potential for long term degradation of buried concrete
	Ecology	Damage to the environment	Localised damage to aquatic habitat causing temporary relocation of certain species
Minor	Humans	Non-permanent health effects to human health (easily prevented by means such as personal protective clothing, etc.)	The presence of contaminants at such concentrations that protective equipment is required during site works
	Controlled waters	Potential minor release of contamination to local water features	Short term or low volume release of potentially polluting material to a secondary surface water course of low existing quality
	Property	Easily reparable effects of damage to buildings, structures and services. Harm which may result in a financial loss, or expenditure to resolve	The loss of plants in a landscaping scheme. Discolouration of concrete
	Ecology	Short term, localised damage may occur; consequences are spatially and temporally limited	Short term or localised disruption to in situ flora or fauna; no lasting effects

Table C: Risk classification (comparison of consequence and probability)

		Consequence (severity)			
		Severe	Medium	Mild	Minor
Probability	High likelihood	Very high risk	High risk	Moderate risk	Low risk
	Likely	High risk	Moderate risk	Moderate/low risk	Low risk
	Low likelihood	Moderate risk	Moderate/low risk	Low risk	Very low risk
	Unlikely	Moderate/low risk	Low risk	Very low risk	Very low risk

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Lancashire And Furness
Published 1851
Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 2000

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.
