Subject: planning application 2018/93676 - Snug Farm, Snug Lane, Hepworth, HD9 1RP

Dear Sirs

Regarding the above planning application number 2018/93676. Firstly on the section Study Of Private Water Supply 5.4 and 5.5 which relates to our property Snug Farm. Both sections are complete lies.

5.4 - I confirm we are on private spring water taken from watercourse Cat Clough, there is a reference that other residents have indicated we are no longer on private supply.

to make such a comment. I would be interested in their names and addresses. With reference to the old chamber they found, this is a water holding chamber which has not been in use for 30 years and which therefore is not indicated by ourselves because it does not supply our water.

We have our water treated by our water filter system, in turn this is serviced by a company called . Each time they service the system they report back to confirm the water is in the condition they would expect. This allows us to have excellent water at all times. No one contacted us regarding a visit, which I find very underhand that they just turn up and start to without our permission. We would have certainly been happy to accommodate them and give a full tour and answered any queries they may have had. As this did not happen it is obvious they simply selected the information they wanted, which is incorrect at every level.

Our next concern is the fact that there is an underground river that runs that comes in from Cat Clough and feeds into another river lower . This river runs down into Jackson Bridge and further into New Mill and onwards to Holmfirth. The underground river is full on and runs none stop all year round, and it has never once stopped. There does not seem to be any reference regarding the damage any contamination could cause to this river. Again this would have been fully explained if they had been courteous enough to contact us before they just turned up. I now wonder if it was more convenient to their cause for us not to be present and to answer any awkward questions that did not suit them.

We are concerned regarding the . There is a least one badger set we are aware of and we have at least seven deer living in our wood, many owls and dozens of pheasant which breed every year. All this wildlife is obviously using the river to drink from and any contamination would be detrimental to them. We are concerned as to who would monitor what was actually being dumped.

Could you please confirm if our own water which everyone drinks, is contaminated as a result if they get planning permission to dump, would Kirklees be responsible.

If you would like to visit as a result of what is mentioned above, we would be delighted to meet you at your own convenience.

Kind regards
