Type of comment: An objection
i wish to challenge doc ref 230023 showing the most northerly door opening inwards on the ground floor. this is incorrect. as it is an emergency exit from the ground floor and opens outwards already... ref 230023 does not show any emergency exits.... my first issue with this is the door already opens outwards, however there are 2 x 1100 commercial bins blocking this exit. which is a health a safety risk itself.... and a recommendation to the fire service or appropriate authorities should be made/reported . where does the applicant propose to relocate their refuse collection area if the northern most door is to be a 'NEW' Emergency exit? including other glass bins and commercial fly tipped refuse at the bottom of daisy lane clearly placed by the applicants business.. the new doc ref of 730024... shows a new emergency exit in its place.... which is clearly not a new EE! on ref 230023 it shows a disabled toilet / facilities on the first floor however.... on ref 230024 it shows the access door becoming an EE only. this can be seen on the east of the proposed plan so how do disabled access the first floor facilities? The new proposed plans 730024... will noise be an issue on the terrace? (noise disturbance and odour) has a study been done due to conservation area etc. and contact with local residents?(effect on neighbouring properties) and secondly THIS IS NOT LEGALLY a smoking area and should be ruled as such in any application speaking of which i would like to enquire about the customers of the proposed applicant being allowed to allow alcohol consumption across towngate on the grass opposite which does affect highway safety
