Thank you for allowing us the opportunity to comment on this application. We are the owners of . We generally have no objection to the application and we will do everything we can to accommodate the build despite the fact that this will no doubt adversely affect access to our property and cause some degree of inconvenience. However, the cable providing us with media services is laid across the dirt track that is to be dug up for the attenuation tank. We have contacted the media suppliers on a number of occasions and have gone to complaint arbitration to try to get this resolved in our favour. The company has refused to move the cable. Our concern is that digging up this area to accommodate the attenuation tank will put the cable at risk and we will be without media services. This is not just about watching TV. We rely heavily on the internet to support our elderly relatives who live alone. I would really like confirmation from the contractors that this cable will be respected and kept good throughout the build. Thank you.
