Hello Mr Wakefield

please add to the objection that this scheme really needs more planting and a noise buffer along wall as this will again have a massive impact with wagons etc and reversing noise the scheme at the moment only has few trees nothing at all it needs fully shielding and lots of mature ever green trees planting property throughout the year both visually and sound If that can please be implemented and insisted on as the new plans do not take any of this into consideration again would much prefer the scheme to be away from home and a more sympathetic scheme implemented to have less impact on living and well being as it is it will horrendous onto this enormous unit.

To summarise, the proposal, in particular Unit 2, will have a considerable overbearing negative impact . This will seriously blight property and have a huge negative impact on day to day living and well-being.

I do feel this unit should be alot lower or even moved the land is big enought to revise the scheme to have less of an impact

thank you
