

About the application

Application number: 2019/91728	
What is the application for?:	Erection of industrial development and formation of new site access from Hudder
Address of the site or building:	Spinksmire Mill, Huddersfield Road, Meltham, Holmfirth, HD9 4AN
Postcode:	

User comments

Type of comment: An objection
As previously stated my main concern is increased risk of flooding. This development combined with development on the other side of the river will mean my house is at the bottom of a concrete funnel. This weekend there was extensive flooding in the field where the proposed car park and original plan to build starter units. This was several feet deep I am astounded that in the flood risk assessment for this plan the starting point is there is no risk of flooding. If this is the starting point how can I be confident that sufficient measures are not put in place to stop any building works making the matter worse. I just want it to be taken seriously and proper measures taken to stop future flooding. I have asked for this to include the owner/builder to undertake building works to make it safe from flooding. The river has never but if you discharge all the rainwater into it it will. I am just asking for them to take responsibility for the impact their buildings will have
