Discharge condition 5 (Phase 2 report) on previous permission 2019/92912 for erection of single storey ancillary building		
Date Responded: 14 Jul 2020	Responding Officer: Richard Hume	Responding Ref: WK/202009452
In our previous response dated 13 May 2020 we advised that the remediation proposals included in the submitted Phase 2 report were considered to be insufficient to be an acceptable remediation strategy. A Remediation Strategy for Gas Membrane Installation document by Code (undated and no reference) has now been submitted. It details the proposals for the installation of gas protection measures to the building and the subsequent validation of the installation. The document is considered to be an acceptable remediation strategy. Recommendations I recommend that the above-mentioned Remediation Strategy is approved. The applicant now needs to install the gas protection measures in accordance with the approved remediation strategy and provide a Validation Report for approval before the condition can be fully discharged.
