
The Sycamore tree in Thunder Bridge

Luc Hayes

Good evening David

Regarding the investigation into the large sycamore tree in Thunder Bridge, I can confirm that the bottom 8ft of the trunk is starting to decay due to the corrosion of the water course that it has grown in. Along with just over one third of the tree being dead and the majority of it being in the crown of the tree, I can strongly advise the removal of this dangerous tree as it is next several properties and also over a public right of way. I would strongly advise you contact Kirklees Council tree department and speak to Nick Godard to request a emergency 5 day application for a TPO removal for the removal of the sycamore tree.

Many thanks
