William

That's fine. Assuming Chris Dows is happy with 4.8m then please then take this email as confirmation that I am satisfied that the new plan adequately protects the line of the proposed Core Walking and Cycling Network repositioned behind the new parking spaces.

Thanks

Tim

The parking spaces are 4.8m in length.

The red line, as shown on the latest version of the location plan (14th December) does include part of the footway. I assume that it will remain adopted and that the formation of a dropped crossing will be done under current Highways Authority standards.
