What is the application for?:	Reserved matters application pursuant to outline permission 2016/92298 outline a
Address of the site or building:	Former North Bierley Waste Water Treatment Works, Oakenshaw, BD12 7ET
Postcode:	

User comments

Type of comment: An objection
I wish to make an objection on the proposed site on the following grounds The roads in the area are not suitable for the amount of traffic and HGVs that will be accessing the units. This will cause danger both to the children, parents and residents in the area. The surrounding roads will be used as a rat run to avoid the congestion caused by the traffic both at school times and generally throughout the day. There have been many accidents at the junctions this development will make more accident highly likely. The area where the proposed car park and the land at the side of the works floods during heavy rain this will lead to problems both for the school and access to the site. There is a large high pressure gas main located across the site boundary that could cause major issues if it is affected. Also a large dia sewage pipe that takes all of south Bradford sewage running across and down the site, some of the pipework is above ground. if there is an emergency, as we have had before at the chemical plants what ever hits the sewers will pass through this system and need to be taken in to account both for all the proposed units and and the chemical plants upstream and written action plans will need to be revised and written. The extra noise day and night is a concern to all residents in the area, this along with all the extra air pollution it will generate for our children to breath. The effect on the environment in the area and the adjacent watercourse will be heavily effected have updated surveys been down as a comparison since the enabling works have started.
