

Planning

2020/92331

No

Strongly and actively object to the planning application for over 1,300 dwelling. The road structures alone in this area cannot cope with the amount of traffic and this extra capacity would impact greatly on highway safety.

To make access way would mean demolition of current houses causing dust and air pollution especially harmful for people who already suffer from asthma and other issues.

This application will also effect the landscape and wild-life in this area resulting in a large area of green belt/natural habitats being destroyed

There are many people on the road who have actively rejected this application and have signs in front of their homes refusing.

The noise disturbances are another factor which will affect families those especially who have younger children.

The above application will also take away farm land from farms resulting in less crop production and loss of local business.

There are also a number of other housing development which are currently under development around this area which have also destroyed a number of wide life/agricultural areas.

It will cause irreversible damage to our environment.

It will destroy the habitats of the diverse wildlife species that live there.

It will affect if not kill the two ancient woodlands.

It will permanently take away our countryside and green belt.

It will adversely affect our childrens futures.
