<p>This land currently is being used as a farm and as such supports the country in bring self sufficient and able to produce our own food. Recent events such as in the Ukraine highlight the need for self sufficiency in food and fuel.</p> <p>This development will also destroy habitat for the kingfisher bird which has been found in the nearby dogloitch wood.</p> <p>It's absolutely abhorrent that when it's evidently clear we are heading towards a climate crisis with rising temperatures that we as a community and council would decide to destroy so much green land which is currently does to be green belt land! Why did the previous council decide to protect this land as green belt? The reasons if anything are even greater and stronger now. We're losing bio diversity fast now with our rollout of urbanisation and further housing plus commercial units are going to add to the pollution levels which are quite high in the batley area to start off with.</p>
