Subject: Planning Application Number 2020/92350
Date: 05 September 2020 20:52:26

I wish to register my objection to the proposed planning application [2020/60/92350](#).
My objections are as follows:

- The junction that intersects Leeds Road and Heybeck Lane is a known congested area. The introduction of further traffic without any further significant road improvements to this area will only exacerbate the risk to life.
- At peak times the traffic to Heybeck lane and Leeds Road is at a standstill, causing significant pollution to the surrounding area and preventing local residents from having quiet enjoyment of their properties. The levels of pollution will only increase as the vehicles from the development enter and egress the site
- The site bounds part of the national woodlands of England which provides a safe environment for a number of protected species of flora and fauna. The development will disturb their habitat, putting further pressure on the delicate ecological systems of the area.
- The noise and dust created during the construction phase will similarly create the same issues.
- Whilst I recognise that the site has been designated as a mixed use development area, planning consent was previously refused on the basis that the site was identified as greenfield. What has changed in the Kirklees planning policy to reclassify this space since the last rejection, as the fears and concerns of the local residents remain consistent and unanswered from this previous application
