---

The plans showing the existing side and rear elevations of the property does not correspond to the actual dwelling house. There is a door and window on the side of the recently extended kitchen facing towards the neighbouring properties on the side and not at the back of the house as shown on the plans.

The recent kitchen extension built in April 2020 has been built with different colour bricks to the original house and therefore looks out of place from the rest of the houses on the close and if they are to build this new two storey side extension they need to use the same bricks as the original house and not the ones used for the kitchen extension in order to blend in with the other houses in the cul-de-sac, otherwise the extension will look extremely unsightly.

The plans do not show the proposed width measurements for the two storey extension. We feel that if the width is kept to the size of the existing garage it will be far less imposing on the neighbouring properties on both the front and side of the house. If the width is any more, hence coming out towards the neighbouring houses on the side, it will have an impact on natural daylight coming into these properties. It will also have an effect on the road in general, restricting the view on traffic coming both ways around the corner.

As the owners have just had an extension completed in April, the garden space has already been drastically reduced even before this two storey extension and is not keeping in line with the rest of the close who have front and rear gardens.
