Highways Development Management**

2020/93107 land east of Longroyd Viaduct and north of Longroyd Lane

Highway development works to widen carriageway to Longroyd Lane to create an extra exit lane, with proposed improvements to the width of a shared footway/cycleway and amendments to traffic signalling

Date Responded:

Responding Officer:

Responding Ref:

This application seeks approval to the highway development works to widen carriageway to Longroyd Lane to create an extra exit lane, with proposed improvements to the width of a shared footway/cycleway and amendments to traffic signalling at land east of Longroyd Viaduct and north of Longroyd Lane, Huddersfield

These works are part of a package of four interventions that have been identified by Kirklees to form phase 1 of the Huddersfield Southern Corridors (HSC) project, and consists of the following:

Widening of Longroyd Lane to accommodate an extra traffic lane, creation of a shared-use footway/cycleway and on-carriageway cycle facility and a new controlled TOUCAN pedestrian / cycle crossing.

Amendments of traffic signal operations to benefit the wider junction.

Given that these works are for a government funded and Kirklees designed scheme Highways Development Management have no objection to these proposals.
