We have concerns about flooding as the stream that crosses the field runs onto our land ,it enters to our pond with only a limited outlet then to a well going underground exiting our property via a 9 in clay pipe down to Manchester road. Another concern is surface water run off and land drains that we do not want to run into the stream as our property could flood and have worries about contamination to the water from construction work and later from the new homes ,we have a spring water feed from the sump to our property. Our mains gas and water cross the land from Lingards road ,which could well be disrupted when work commences. The engineering plan states the possible use of the private sewer we think it won't be feasible as our sewer connects to the manhole on the lane and our sewer is at the lowest point to get sufficient fall from our property. Our concern is, if a blockage occurs on the outlet to the main sewer,on Manchester road, foul waste may well be forced back towards our house.
