<p>the proposed site OWNED BY KIRKLEES COUNCIL has ongoing flooding/water retainion issues, causing flooding of the highway/residents garden. The section known as TP5 has poor permeability/surface water flooding of which does not soak away, causing a large pond to form which then floods into the nearby schools lower nature reserve, this then floods into residents gardens and without a boundry wall has been known to enter properties OF WHICH KIRKLEES COUNCIL TAKES NOT RESPONSABILITY !!!!! The inital riverside development area TP5 was earmarked for a dry overflow [water retaining] pond within a urban green space, without this the existing problams WILL still PERSIST and access to area TP5 will be severly restricted due to the close proximity of the proposed ballestrude fencing to residents boundarys. Access to the proposed site, will inadvertantly contribute to road traffic accidents on the RAVENSTHORPE ROAD INTERNATIONAL RACEWAY !!!!!!!!!. restrictive access when turning into proposed site will have a dramatic effect on speeding traffic having already "jumped" the speed humps. Having heavy goods traffic navigating speed humps shaking/awaking residents from 5.30am, it now seems we need to be awake earlier at 1st light helped by a more natural form cockrels . Thank you, long suffering resident of ravensthorpe road</p>
