In regards to the formation of a car park, most of Back Fitzwilliam agree that the cobbled road is too narrow for any further traffic, other than that of vehicles that need access to back gardens of residents. Back Fitzwilliam street is a street full of families with small children that play on the back street through out the year. I wish to state my strong objection in having any sort of entrance or exit to the carpark from Back Fitzwilliam street. This should not be an issue at all as there is a very adequate entrance on the opposite side (Waverly Street) In regards to roof lights, it does not give detail into what this is (glass roof installation or actual lights on the roof?) Please take into consideration families of the street have their bedrooms facing the building in question and the attic windows of these houses do not have blinds, this will be an issue at night. I have been very sad to see all of the beautiful trees and nature being taken down, I hope that the trees facing Back Fitzwilliam street are left to help with some privacy for us as all the windows of the building in question look down into the house of Back Fitzwilliam Street. I wish the property developers all the best in their venture and request that they take into consideration that they are renovating within a heavily residential area full of families.
