Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

APPENDIX IV

Conceptual Site Model (CSM)

CRITICAL POLLUTANT LINKAGES					
SOURCE		PATHWAY		RECEPTOR	
S	1. Any areas of potential made ground (no significant deposits anticipated) on site	P	1. Ingestion and Dermal contact	R	1. Human health (End users and construction workforce)
	2. Potential off-site ground gas generation and migration to site		2. Air - Inhalation of vapours (indoor & outdoors) and direct contact with dust		2. Controlled Waters - Groundwater within the underlying strata (Secondary A Aquifer: Solid Geology) Controlled Waters
			3. Consumption of home-grown produce and attached soil		3. Building materials*
			4. Migration through existing services		4. Adjacent sites
			5. Direct contact with building materials		5. Flora and fauna
			6. Surface runoff and leachate migration		

MADE GROUND: Published BGS data indicates an absence of significant recorded made ground materials on the site. Similarly, during the site reconnaissance (walkover) survey no significant areas of made ground were identified at surface. Taking into account the known history of this site, other than natural materials used to backfill any service trenches, significant depths of made ground are not anticipated for this site

The published BGS data indicates that the site is absent of superificial deposits, with the solid geology present at or close to surface. However, the archive BGS boreholes (SE22SE 812/ 817/ 819), located to the south of the site in the same geological setting, record firm to stiff silty clays up to c.2.70m bgl and are most likely representative of residual soil deposits arising from the parent bedrock

The BGS records the underlying solid geological deposits to comprise the Pennine Middle Coal Measures, which typically comprise cyclical alternations of sandstone, mudstone and siltstone along with productive coal seams. The majority of the site is shown to be underlain by undifferentiated deposits, with a fault recorded to cut across the northern end of the site, trending south west to north east and the downthrow to the south. To the north of this fault, within the northwest of the site, the site is shown to be underlain by the Thornhill Rock (sandstone) formation
