

Subject: Objection for planning2021/93464

Since being made aware of this application it already has greatly affected my wellbeing and health causing with the feeling that I will be imprisoned in my own house with lack of light and space.

The planning application to remove existing glass conservatory which reflects light and erect a single storey stone rear extension would impact irretrievably on our attached property (no64) I cannot object strongly enough and no words or viewing of plans on paper can express or reveal how such an extension would affect the rear of our property without physically seeing the layout of the rooms in person.

The Victorian Wheatcroft villas (previously interlinked with internal doors for two sisters to allow separate living accommodations) were built on a particular unique individual footprint for the lay of the land to allow the maximum amount of light to each of the downstairs rooms at the different aspects including the rear of the building (east facing) which forms two of our main rooms, any extension to the rear of 62 built beyond the existing footprint would substantially block natural daylight to the rear of our property, number 64, to its much used day/dining room and dining kitchen meaning that electric lights would need to be used at all times which will greatly impact on our day to day living and mental health.

The proposed extension would be overbearing and create an enclosed dark and damp area due to the overshadowing created by the planned stone wall extension which is in extremely close proximity to our adjoining boundary and dining room and kitchen windows and extends beyond the original building lines which allows the access of sun and daylight.

The quality and availability of air flow which now flows freely around the building allowing buildings and paving areas to dry out would be greatly restricted and blocked due to the extent of stone walling being suggested, causing problems with damp and algae / fungus issues to the rear of our property rendering it an unusable area.

I can only reiterate that any proposal can only be assessed accurately if viewed in person as plans do not show the way the rooms are positioned on each of properties and how any alterations would affect the adjoining dwelling no64.
