The solar farm will be unsightly to the area of natural beauty , in the age of looking after our green spaces and biodiversity i cannot see why the solar farm could not be built in unused brown field areas more local to where the system would after be connected into the main electrical grid . I also feel that the amount of cost to build the farm versus the electricity produced is not viable for the disruption it will cause to the area , the public footpaths are well used around the area for public enjoyment and relaxation , the area will be left with a blot on the landscape . We have an amount of birds of prey in the area that naturally hunt the grasslands that will have an amount of natural habitat taken away plus the deer that roam the fields and woods will be driven away .
