

**Consultation Response from Mark Berry KC,
Highways Development Management**

2021/93644 Low Farm, Wakefield Road, Flockton, Huddersfield, WF4 4BB

Erection and operation of grid-connected solar photovoltaic farm to supply up to 49.9MW, with ancillary infrastructure and landscaping and biodiversity enhancements

Date Responded: 28-6-2022

Responding Officer: Mark Berry

Responding Ref: 16-15-13

The Highways consultation response dated 27th October 2021 asked the applicants explain why a John Deere Tractor and Rolland Trailer has been tracked for the accesses serving parcels 2 to 8 and not a 16.5 m articulated lorry? The largest vehicle anticipated to use these accesses during the construction period should be tracked.

The applicants have explained that the tracking for a tractor and trailer for parcels 2 to 8 is because this is the type of vehicle which will in fact be used. Large deliveries of materials will be made in the first instance to Parcel 1 where the site compound is located. From there they will be moved where needed around the site by tractor and trailer, and not a 16.5 m articulated lorry.

The anticipated daily tractor and trailer movements from Parcels 1 (and the construction compound) along Wakefield Road to the other Parcels is just 15.

Given the low number of movements along Wakefield Road Highways Development Management have no objection to these proposals
