<p>Further to the additional information and/or amendments received by Kirklees.</p> <p>Still strongly object to this amended proposal</p> <p>The UK is now facing a major challenge as it is becoming increasingly reliant on imported food. It has recently been stated that food is a top priority and the UK needs to produce and control more food production. Using this arable land for the application of a solar photovoltaic farm is preposterous it does not make sense in light of the need for greater food security and independence. This approximate 180 acre site grows many tonnes of produce for the production of food.</p> <p>Surely there is land within the Kirklees area that is none productive where such an application should be considered.</p> <p>The current environment around this proposed site which sees hawks, buzzards and many other species of wildlife thriving will have their natural habitats removed, we will lose this wildlife if permission is granted.</p> <p>The prospect of not having this green belt land remain in existence would be extremely detrimental to the wildlife, local residents and many walkers along the Kirklees way.</p>
