Keyland Development
North Bierley Phase 2

Technical Note: Response to Kirklees Council Highways

12 May 2022
Version 1.0
Issue

1 Introduction

Fore Consulting Limited (Fore) has been commissioned by Keyland Developments to assist the preparation of an outline planning application (with all matters reserved) for employment development on land to the south of the former North Bierley Waste Water Treatment Works (WWTW), Bradford, in respect of transport and highways matters. This included the preparation of a Transport Assessment[1] submitted as part of a planning application to Kirklees Council (KC) and Bradford Metropolitan District Council (BMDC)[2].

The purpose of this note is to provide a response to the comments received from Kirklees Council Highways Development Management (HDM) in relation to the Transport Assessment and Framework Travel Plan submitted as part of the outline planning application, dated 8 February 2022.

2 Transport Assessment

2.1 Site Access

HDM Comment:

> *Adequate HGV turning facilities need to be incorporated into the Phase 2 Section 38 layout, to ensure that any HGV's that may enter the site can exit in forward gear if unable to access a development plot. Swept Path Analysis (SPA) is required to confirm the facility is adequate to accommodate both rigid and articulated HGVs. No Swept Path Analysis (SPA) has been provided for the site access or service yard.*

Fore Response:

The application is in outline and therefore the layout of the development will be determined as part of a future application for reserved matters.

[1] *Transport Assessment: North Bierley Phase 2, Fore Consulting Limited*, 28 October 2021.
[2] Planning application reference: 2021/60/94208/E

For the purposes of the outline planning application, an illustrative masterplan has been prepared to demonstrate one way in which a scheme could be delivered on the site. Other layouts may be feasible, though the clear likelihood is that access will be taken by effectively continuing the infrastructure to be provided as part of the Phase 1 permission into the Phase 2 site. Such an arrangement is indicated on the illustrative masterplan.

Notwithstanding the illustrative nature, swept path analysis of the masterplan layout has been undertaken as shown on Fore drawing 31019/100/P001. This shows that maximum legal length articulated vehicles and refuse collection can enter the site and through into the service yard, reverse into a parking bay and exit the site the same route as they entered in forward gear. It has also been shown that up to 7.5t rigid vehicles can turn at the turning head provided at the site access (i.e. should a vehicle access the site in error). As such, access is satisfactory for the purposes of the outline planning application.

HDM Comment:

> *These [access works] will need to be subject to an independent Stage 1 Road Safety Audit (RSA) in accordance with GG119, with an RSA Brief to be agreed in advance with HDM.*

Fore Response:

Given that access will likely be formed by a simple continuation of the access road to be provided as part of the Phase 1 development (which in turn is subject to separate discussions with the Council regarding the details of the layout), a Road Safety Audit is not considered to be necessary for the purposes of the outline planning application. It would be more appropriate to undertake an RSA at the reserved matter stage, when the layout is to be determined. This can be appropriately secured through a condition on an outline planning permission.

HDM Comment:

> *Further justification of the parking, service bay and trailer parking provision is also required.*

Fore Response:

The end occupier of the site is not known at this stage and the outline planning application seeks flexibility in the land uses being applied for. It is therefore not possible to define the operational parking requirements of the development at this stage. Such matters can be

appropriately dealt with as part of a reserved matters application, when greater certainty on the end occupier is available.

Notwithstanding this, the illustrative masterplan demonstrates that 130 car parking spaces could be provided, 12 of which could be allocated for use by disabled staff or visitors. Charging provision for electric vehicles and cycle parking will be provided, and the details of this can be appropriately determined through a future reserved matters application.

2.2 Transport Assessment

HDM Comment:

Undertake a revised traffic assessment and associated junction modelling on the basis of a Parcel Distribution Centre specific trip rate obtained from the TRICS database.

Fore Response:

Sensitivity testing has been undertaken assuming that a proportion of the development is B8 parcel distribution use.

Vehicle trip rates have been derived from the TRICS database, following interrogation based on the criteria set out in Table 1. The methodology is consistent with that set out in the submitted Transport Assessment.

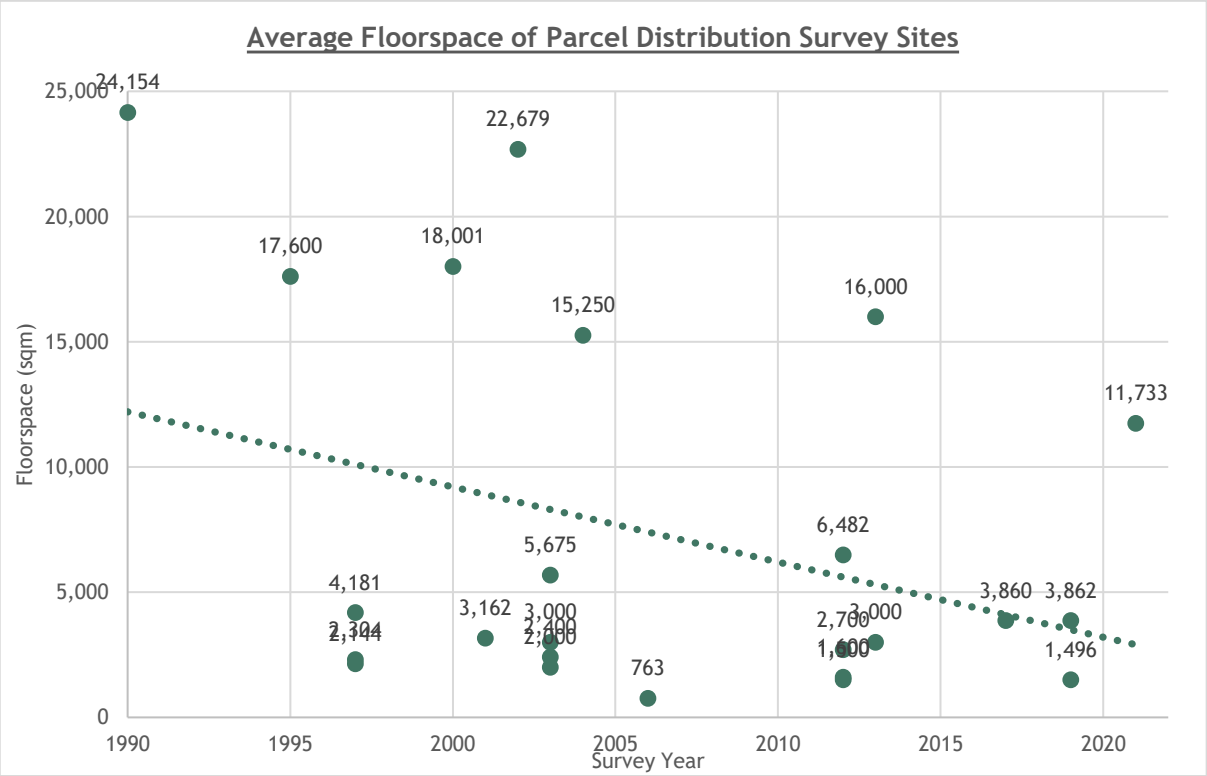
Table 1: TRICS Search Criteria

TRICS Land Use Category	Employment (02) / Parcel Distribution Centres (G)
Location	Suburban Area / Edge of Town / Free Standing
Parameter	Gross Floor Area (GFA)
Actual Range	1,496 to 16,000 sqm
Survey Days	Monday - Friday
Calculation Factor	100 sqm

For the purposes of this sensitivity test, 6,000 sqm (50%) within the site is assumed to be development for parcel distribution use. This is based on:

- A review of parcel distribution survey sites in the TRICS Database, which demonstrates that approximately 2/3 of sites surveyed were less than 6,000 sqm. In addition, Screenshot 1 indicates a downward trend in the relationship between average floorspace and survey year, indicating that floorspaces associated with parcel distribution units are reducing over time.

Screenshot 1: Average Floorspace of Parcel Distribution Survey Sites in TRICS Database



- Advice from the applicant's agent, which highlights that 6,000sqm would be considerably beyond the average size of unit for the parcel distribution sub-sector of B8. Assuming a floorspace of 6,000sqm is therefore a robust assumption for this assessment.

On this basis, it is concluded that should an occupier seek to take floorspace at the site for parcel distribution use, it is unlikely that they would seek more than 6,000 sqm. For the purposes of this sensitivity test, the remainder (6,077 sqm) is assumed to be used for B2 industrial use, as the worst-case scenario in terms of traffic generation for the proposed development during the peak hours (compared to B8 storage and distribution use).

The vehicle trip rates are summarised in Table 2 for the weekday AM and PM peak hours. The resulting TRICS output is presented in full at Appendix A.

Table 2: Vehicle Trip Rates

Time Period	Parcel Distribution Use			Industrial Use		
	Arr.	Dep.	Total	Arr.	Dep.	Total
	Vehicle Trip Rates (Trips per 100 sqm)					
Weekday AM Peak Hour	0.315	0.317	0.632	0.525	0.099	0.624
Weekday PM Peak Hour	0.318	0.468	0.786	0.059	0.433	0.492
	HGV Trip Rates (Trips per 100 sqm)					
Weekday AM Peak Hour	0.043	0.071	0.114	0.029	0.025	0.054
Weekday PM Peak Hour	0.062	0.069	0.131	0.011	0.013	0.024

The resulting vehicle trip generation associated with the sensitivity test scenario is shown in Table 3. Comparison is made to the '100% Industrial Use' scenario assessed for the purposes of the submitted Transport Assessment (based on agreed trip rates), as the 'worst-case' scenario in terms of traffic impacts associated with the proposals.

Table 3: Vehicle Trip Generation - Sensitivity Test Scenario

Time Period	Vehicle Trip Generation			HGV Trip Generation		
	Arr.	Dep.	Total	Arr.	Dep.	Total
	Parcel Distribution Use (6,000 sqm)					
Weekday AM Peak Hour	19	19	38	3	4	7
Weekday PM Peak Hour	19	28	48	4	4	8
	Industrial Use (6,077 sqm)					
Weekday AM Peak Hour	32	6	38	2	2	3
Weekday PM Peak Hour	4	26	30	1	1	1
	Sensitivity Test - Total Development (12,077 sqm)					
Weekday AM Peak Hour	51	25	76	4	6	10
Weekday PM Peak Hour	23	55	78	4	5	9
	Comparison - 100% Industrial Use (12,077 sqm)					
Weekday AM Peak Hour	63	12	75	4	3	7
Weekday PM Peak Hour	7	52	59	1	2	3

The sensitivity test scenario demonstrates that a parcel distribution use on the site would generate a relatively small number of additional vehicle movements compared to the scenario if the site is developed fully for industrial use. Specifically, less than 20 additional vehicle movements in the PM peak hour, and marginal increase of 1 extra vehicle in the AM

peak hour (albeit 3 additional HGV movements could be expected). Such increases are not considered to be significant in the context of the operation of the wider network.

HDM Comment:

The proposed Phase 2 traffic distribution is not agreed and must be clarified. It is noted that to provide a consistent basis for assessment, the previously agreed Phase 1 traffic distribution must be used.

Fore Response:

In the submitted Transport Assessment, vehicle trip distribution associated with the proposed development was estimated based on 2011 Census data for journeys to work, with HGVs split equally between the M62 motorway, M606 motorway and A58 Whitehall Road. This ensured robustness in the assessment, and that HGVs were not associated with routes they would not travel on to / from the site.

When compared to the trip distribution associated with Phase 1, there are minor differences in the percentage of trips heading north towards Mill Carr Hill Road, north-west on Bradford Road and at M62 Junction 26. When undertaking the submitted Transport Assessment, the Phase 1 trip distribution was not used as it was unclear within the associated Transport Assessment whether distribution had been separated based on light vehicles and HGVs.

However, sensitivity testing has been undertaken using the agreed Phase 1 trip distribution, with the modelling results presented in the following section. It is assumed that the same trip distribution applies to both light vehicles and HGVs.

HDM Comment:

A number of issues have been identified with the modelling approach, which must be addressed.

Fore Response:

The junction models have been reviewed in response to the points set out in Kirklees Council response note, as follows:

- 'One Hour' model profile applied to all three junctions.
- Visibility and other geometric parameters altered to match the latest S278 design proposals.
- As shown on the s278 design proposals, both the Mill Carr Hill Road approach arm to Bradford Road and Cliff Hollins Lane approach arm to Mill Carr Hill Road have been altered to accommodate one lane plus flare.
- Junction and arm labelling applied to all three junctions.
- At the Bradford Road / Mill Carr Hill Road junction, blocking queue for C-B traffic reduced to 2 PCUs.

Cliff Hollins Lane / Site Access Junction

The model results for the Cliff Hollins Lane / Site Access junction are summarised in Table 4, and presented in full at Appendix B.

Table 4: Cliff Hollins Lane / Site Access Junction - Highway Capacity Assessment

Approach	Weekday AM Peak Hour		Weekday PM Peak Hour	
	RFC	Q	RFC	Q
2021 Base				
Site Access (LT + RT)	0.00	0.0	0.00	0.0
Cliff Hollins Lane west (RT)	0.01	0.00	0.00	0.0
2031 Do Minimum				
Site Access (LT + RT)	0.07	0.1	0.24	0.3
Cliff Hollins Lane west (RT)	0.32	0.5	0.05	0.1
2031 With Development – 100% Industrial Use				
Site Access (LT + RT)	0.10	0.1	0.33	0.5
Cliff Hollins Lane west (RT)	0.44	0.9	0.07	0.1
2031 With Development – 100% Warehousing Use				
Site Access (LT + RT)	0.09	0.1	0.28	0.4
Cliff Hollins Lane west (RT)	0.36	0.6	0.07	0.1
2031 With Development – 50% Industrial Use / 50% Warehousing Use				
Mill Carr Hill Road west (RT)	0.12	0.2	0.34	0.5
Cliff Hollins Lane (LT + RT)	0.42	0.8	0.10	0.1

The assessment demonstrates that the access junction will operate satisfactorily during the weekday AM and PM peak hours in all three 'With Development' scenarios. The maximum RFC value is significantly below the normal threshold value of 0.85 on all approaches, with maximum average queues of less than 1 PCU modelled.

Mill Carr Hill Road / Cliff Hollins Lane Junction

The model results for the Mill Carr Hill Road / Cliff Hollins Lane junction are summarised in Table 5, and presented in full at Appendix C.

Table 5: Mill Carr Hill Road / Cliff Hollins Lane Junction - Highway Capacity Assessment

Approach	Weekday AM Peak Hour		Weekday PM Peak Hour	
	RFC	Q	RFC	Q
2021 Base				
Mill Carr Hill Road west (RT)	0.01	0.0	0.00	0.0
Cliff Hollins Lane (LT)	0.05	0.1	0.09	0.1
Cliff Hollins Lane (RT)	0.01	0.0	0.01	0.0
2031 Do Minimum				
Mill Carr Hill Road west (RT)	0.35	0.7	0.05	0.1
Cliff Hollins Lane (LT)	0.11	0.1	0.29	0.4
Cliff Hollins Lane (RT)	0.1	0.0	0.03	0.0
2031 With Development – 100% Industrial Use				
Mill Carr Hill Road west (RT)	0.49	1.2	0.07	0.1
Cliff Hollins Lane (LT)	0.13	0.2	0.37	0.6
Cliff Hollins Lane (RT)	0.01	0.0	0.03	0.0
2031 With Development – 100% Warehousing Use				
Mill Carr Hill Road west (RT)	0.39	0.9	0.07	0.1
Cliff Hollins Lane (LT)	0.12	0.2	0.32	0.5
Cliff Hollins Lane (RT)	0.01	0.0	0.03	0.0
2031 With Development – 50% Industrial Use / 50% Warehousing Use				
Mill Carr Hill Road west (RT)	0.46	1.1	0.11	0.2
Cliff Hollins Lane (LT)	0.15	0.2	0.38	0.6
Cliff Hollins Lane (RT)	0.01	0.0	0.03	0.0

The assessment demonstrates that the Mill Carr Hill Road / Cliff Hollins Lane junction will operate satisfactorily during the weekday AM and PM peak hours in all three 'With

Development' scenarios. The maximum RFC value is significantly below the normal threshold value of 0.85 on all approaches, with maximum average queues of just over 1 PCU modelled.

Bradford Road / Mill Carr Hill Road Junction

The model results for the Bradford Road / Mill Carr Hill Road junction, based on the trip distribution derived in the submitted Transport Assessment are summarised in Table 6, and presented in full at Appendix D.

Table 6: Bradford Road / Mill Carr Hill Road Junction - Highway Capacity Assessment

Approach	Weekday AM Peak Hour		Weekday PM Peak Hour	
	RFC	Q	RFC	Q
2021 Base				
Mill Carr Hill Road (LT)	0.11	0.1	0.18	0.2
Mill Carr Hill Road (RT)	0.21	0.3	0.32	0.5
Bradford Road south (RT)	0.21	0.3	0.12	0.1
2031 Do Minimum				
Mill Carr Hill Road (LT)	0.19	0.2	0.42	0.7
Mill Carr Hill Road (RT)	0.36	0.6	0.53	1.1
Bradford Road south (RT)	0.51	1.4	0.17	0.2
2031 With Development – 100% Industrial Use				
Mill Carr Hill Road (LT)	0.21	0.3	0.51	1.1
Mill Carr Hill Road (RT)	0.41	0.7	0.60	1.4
Bradford Road south (RT)	0.63	2.4	0.18	0.3
2031 With Development – 100% Warehousing Use				
Mill Carr Hill Road (LT)	0.20	0.3	0.45	0.8
Mill Carr Hill Road (RT)	0.38	0.6	0.56	1.2
Bradford Road south (RT)	0.55	1.7	0.18	0.3
2031 With Development – 50% Industrial Use / 50% Parcel Distribution Use				
Mill Carr Hill Road (LT)	0.23	0.3	0.52	1.1
Mill Carr Hill Road (RT)	0.42	0.8	0.61	1.5
Bradford Road south (RT)	0.61	2.2	0.21	0.3

The assessment demonstrates that the Mill Carr Hill Road / Cliff Hollins Lane junction will operate satisfactorily during the weekday AM and PM peak hours in all three 'With Development' scenarios. The RFC is predicted to remain below the normal practical

capacity threshold on all approaches. Modelled queues would be satisfactorily accommodated, without impacts on the wider network.

M62 Junction 26

As highlighted above, in comparison to the vehicle trips that could be expected to be generated if the site is fully occupied for industrial use, accommodating 6,000 sqm of parcel distribution use (with the remainder as industrial use) would not materially affect the operation of the wider network.

Specifically in relation Junction 26 of the M62, on the basis of the agreed trip distribution assumptions, 74% of generated vehicle trips would be expected to arrive and depart via all approaches to Junction 26. Compared to the situation if the site is fully occupied for industrial use, this equates to approximately additional 15 two-way vehicle movements across the wider junction and associated approaches during the PM peak hour, and a marginal increase during the AM peak hour. Such impacts are considered to be immaterial in the context of the operation of Junction 26 as assessed for the purposes of the planning application to date, as discussed and agreed with National Highways.

2.3 Accessibility, Sustainability and Travel Plan

HDM Comment:

A more accurate review of pedestrian/cycle accessibility should be included, with corrected walking/cycling isochrone plans.

Figure 2 should be updated to provide a more realistic pedestrian catchment. It is also recommended that the indicative development proposals are amended to ensure that pedestrian entrances are located to minimise walking distances and provide high quality links through the site and to the public highway.

Figure 3 should be updated to provide a more realistic cycling catchment measured from the Phase 2 plot entrance.

Fore Response:

Revised figures in line with the above are appended to this note. The revised figures are not considered to change the assessment of the site as set out in the submitted TA; this is because the figures were measured from the indicative Phase 2 site access. Therefore, the site is accessible to the wider community on foot or by cycle, and options exist for future staff and visitors to travel to the site by sustainable modes. Both the indicative site access road for the Phase 1 and Phase 2 sites, and the indicative site access for the Phase 2 site are shown on the revised figures for further clarification.

It is also noted that the accessibility of the Phase 2 site is not materially different to that in the southern part of the Phase 1 site, which was found to be acceptable by the Council in determining the respective application.

HDM Comment:

The applicant should investigate and propose improved cycling provision along the site access roads and the local highway network. Based on an initial review by HDM, the following provision appears to be feasible and should be investigated as a minimum:

- *Min. 3m wide combined cycle/footways along both sides of the site access roads. As mentioned previously the current draft S38 designs do provide sufficient width for these to be accommodated.*

- *Min. 3m wide combined cycle/footway on west side of Cliffe Hollins Lane that connects to the S38 provision, and then continues west on Mill Carr Hill Road (south side).*

- *Once the combined cycle/footway reaches the proposed refuge island on Mill Carr Hill Road, it may be necessary to terminate the provision, as there appears to be limited to scope to provide any additional facilities at the Mill Carr Hill Road/Bradford Road junction. Should this be the case, a safe entry/exit treatment of the cycle/footway will be required, which could include a right turn lane for cyclists to gain access to the cycle /footway immediately prior to the refuge island. To provide this provision, it may also be necessary to slightly shorten the proposed two lane section on the Mill Carr Hill Road minor arm of the junction with Bradford Road. Should this be the case, the impact on capacity at the junction needs to be assessed through updated traffic modelling (see Transport Assessment comments below).*

Notwithstanding the above, consideration for further cycling improvements at the Mill Carr Hill Road/Bradford Road junction and wider network should be investigated. In particular, any measures that improve access to/from Wyke Lane and the Spen Valley Greenway (NCN 66) should be investigated.

Fore Response:

This has been considered by the applicant:

- It is understood that land outside the highway boundary and controlled by a third party is required to deliver a widened footway / cycleway at the junction of Mill Carr Hill Road / Cliff Hollins Lane. Similarly, the Spen Valley Greenway is remote from the

application site. In both cases, improvement works as suggested cannot therefore be readily delivered by the applicant within the context of this planning application.

- The works would mean the s278 works being implemented as part of the Phase 1 consent are abortive, and further disruption would be required in future to construct the identified cycleway / footway.

Overall, the quantum of development proposed as part of the application is limited, and the off-site improvements suggested are not considered to be reasonably related to the proposals in scale and kind.

HDM Comment:

The plan should be clear on what actions and measures are proposed, rather than referring to 'consider' measures that could easily be disregarded at a later date.

Fore Response:

The Framework Travel Plan has been developed to be adopted and updated by the future Occupier. As the future Occupier is not yet known, suggested measures have been included for adoption within the Final Travel Plan required to be submitted to Kirklees Council within 6 months of occupation. This timeframe will enable the future Occupier to consider whether a particular measure is feasible based on their business operations. For example, operational requirements and minimum staffing numbers may mean that employees might not be able to adjust their working hours.

It is therefore appropriate for travel planning measures to be for consideration at this stage, to ensure that they do not negatively impact on business operations. The Framework Travel Plan will be updated to note that the list of measures presented are not exhaustive, and other measures should also be considered through the development of the Final Travel Plan.

HDM Comment:

An Annual Travel Plan budget should be identified, to allow measures to be developed each year in line with the agreed Action Plan.

Fore Response:

As noted above, the future Occupier is not yet known therefore it is not considered appropriate for a Travel Plan budget to be identified at this stage.

An annual budget could be identified through the development of the Final Travel Plan by the Occupier, if measures are adopted that require considerable funding. Section 2.4 of the Framework Travel Plan has been updated to reflect this.

HDM Comment:

> *Safe, secure and covered cycle parking facilities must be provided, as well shower, locker, changing and drying facilities.*

Fore Response:

Cycle parking and associated showers, changing facilities and lockers will be provided. The precise details will be confirmed and determined at the reserved matters application stage.

HDM Comment:

> *The Framework Travel Plan states that it is aimed at employees only. The Travel Plan must also include measures that address business use and operations.*

Fore Response:

As noted above, the document represents a Framework Travel Plan for the development. The future Occupier is not yet confirmed; therefore, their business use and operations are unknown.

To be sustainable, travel planning should not unduly hamper the operation of a future Occupier. Specifically, restricting vehicle movements for a use based on moving goods by road, might be seen as an unacceptable control. This could impede both marketing and occupation, and may undermine the economic objectives of the Local Plan allocation. It is considered that this issue is more appropriately considered in the light of a known Occupier, rather than at this early stage in the process (when the Occupier is not confirmed).

Notwithstanding this, the Framework Travel Plan will be updated to note that the Final Travel Plan produced by the Occupier should include reasonable measures to address business use and operations.

HDM Comment:

The interim targets have been based on current MSOA Kirklees 003 car driver percentage of 77%. This is not an ambitious target and is not acceptable. A reduction of 10% of single occupancy car trips over the 5 year monitoring period would be more appropriate.

Fore Response:

Section 2.7 of the Framework Travel Plan states that an ***initial*** target is set based on 2011 Census data. It is considered that Census data for MSOA Kirklees 003, within which the site is located, is a reasonable proxy for the development, in lieu of any other comparable data.

The Framework Travel Plan also states that the target will be reviewed following the findings of the first survey. This is appropriate for a number of reasons:

- It is not currently known where future employees will be travelling from and therefore the 2011 Census data may not be representative of the workplace population.
- The full extent of the impact of the Covid pandemic on travel patterns recorded in 2011 is not known.
- Findings from the 2021 Census may be published prior to first occupation, which may represent a more reasonable mode share for the site.

Notwithstanding this, Section 2.7 of the Framework Travel Plan has been updated. The target mode share has been re-labelled as a 'baseline' target, with a commitment that the future Occupier will review the target following the findings of the first survey and overtime will seek to achieve a reduction in journeys made by car as an indicator that the development is supporting journeys by sustainable modes.

HDM Comment:

The Framework Travel Plan suggests that the occupier will sign up to the West Yorkshire travel Plan Network, which is welcomed. However, the wording is unclear and must be revised.

Fore Response:

Noted. Section 4.4 of the Framework Travel Plan has been updated.

HDM Comment:

Measures to encourage public transport use are essential and should address the significant barrier of walking distance to the services.

Fore Response:

Appropriate measures have been included within Section 4.4 with regards to encouraging and promoting public transport use. As previously noted, the Travel Plan provides a Framework for the future Occupier to develop a Final Travel Plan. Further, the list of measures included is not exhaustive therefore there are opportunities for the future Occupier to consider additional measures for promoting public transport.

HDM Comment:

Improved car sharing measures should be proposed and not simply the promotion of the Lift Share scheme. An in-house car share scheme and supporting measures could easily be introduced.

Fore Response:

The Framework Travel Plan identified a list of measures to support car sharing, not just the promotion of www.liftshare.com as suggested by HDM. Measures included in Section 4.5 of the Framework Travel Plan to support car sharing are as follows:

- *"The Occupier should facilitate a car share matching exercise in order to assess which employees can car share with another colleague as this may be a viable sustainable travel option for many.*

- *The Occupier should consider allowing employees to adjust working hours in order to find a car share match, and where possible recruit from local area.*

- *The Occupier should consider allocating a proportion of parking as priority spaces for car sharers."*

Further, the list of measures included is not exhaustive therefore there are opportunities for the future Occupier to consider additional measures for reducing car use as suggested such as an in-house car share scheme.

Notwithstanding the above, it is proposed that a proportion of spaces are allocated as priority spaces for car sharers at construction stage. In lieu of any adopted Kirklees Council guidance on car sharing spaces, it is proposed that a minimum of 5% of the parking provision will be reserved for car sharing.

Section 4.5 of the Framework Travel Plan has been updated to reflect the above.

HDM Comment:

Kirklees Council require Travel Plan monitoring fees to be secured as part of the S106 agreement. For a development of this scale (classed as a 'Large Scale Major Development' that is in excess of 10,000m^2) the fee is £15,000 (£3,000 per year for 5 years).

Fore Response:

Clarification is sought on how the Travel Plan monitoring fee has been reached.

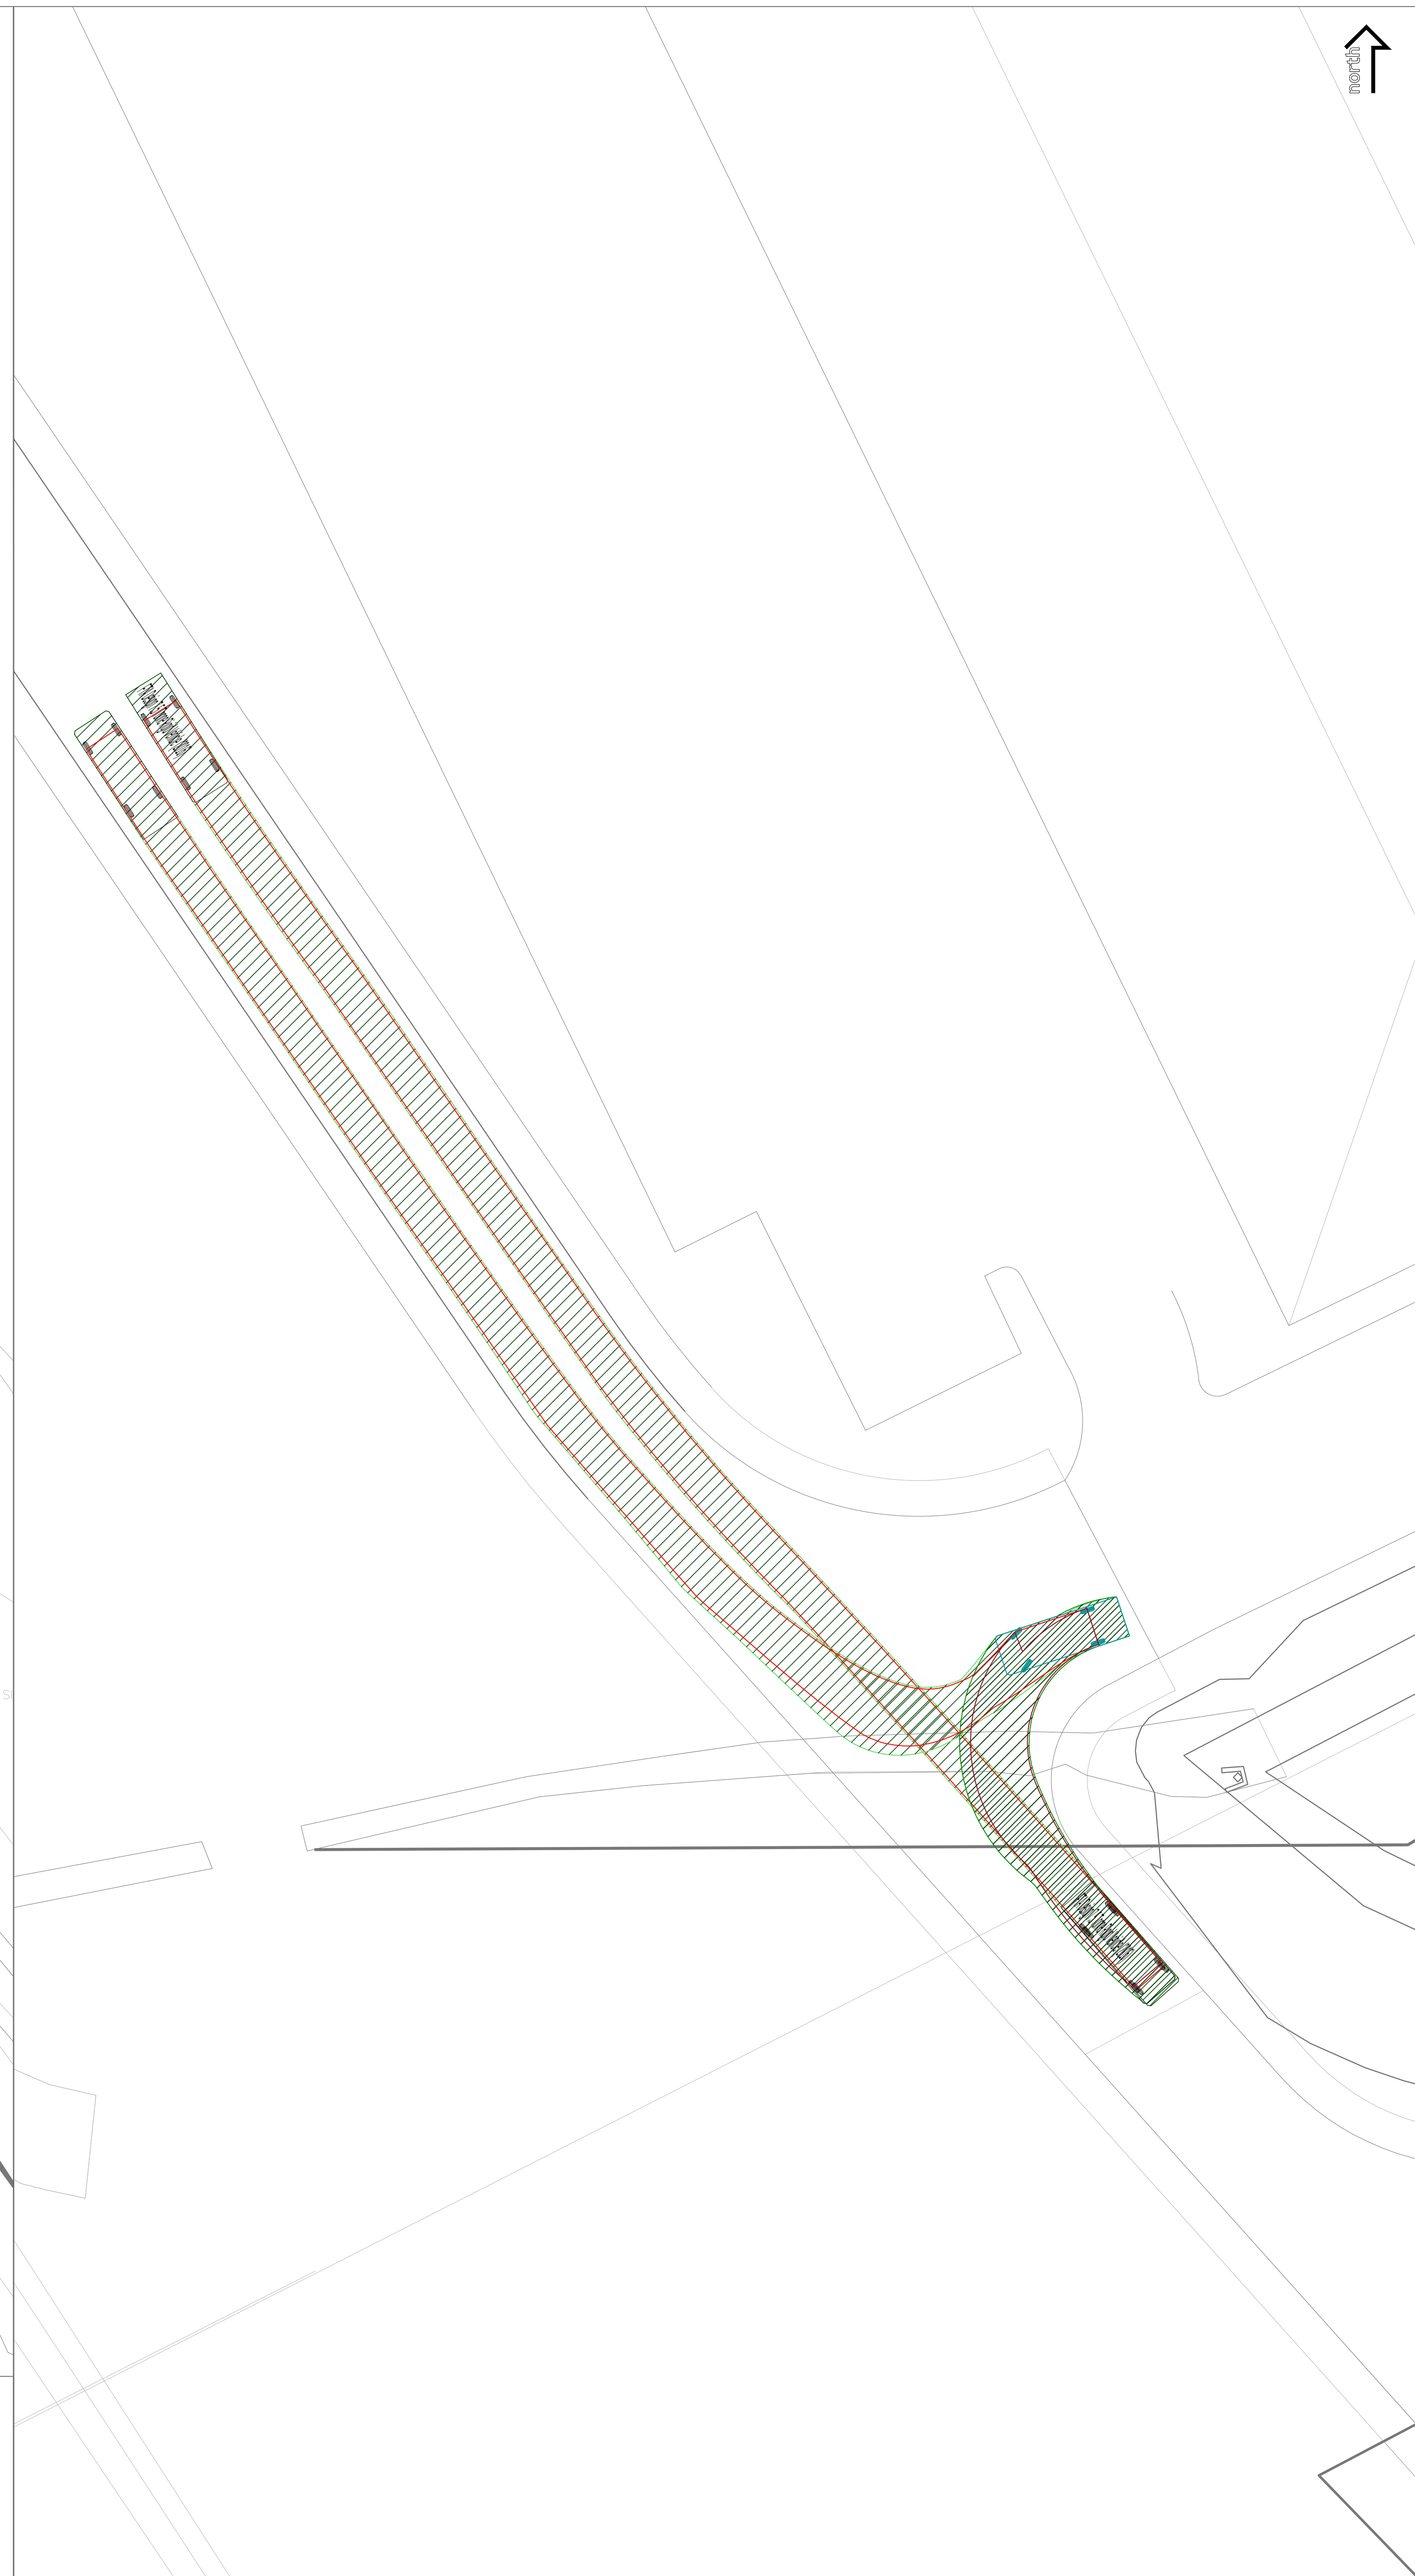
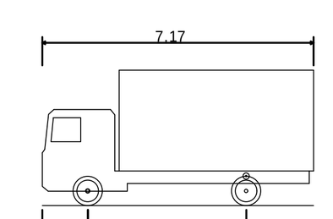
Track Width	2.500m
Lock to lock time	4.00s
Kerb to Kerb Turning Radius	10.150m



NOTE: ADOPTABLE TURNING HEAD MOVEMENT AT GATED ACCESS FOR FTA DESIGN 7.5T VEHICLE



FTA Design 7.5 Tonne Rigid Vehicle (2016)

Overall Length	7.170m
Overall Width	2.300m
Overall Body Height	3.580m
Min Body Ground Clearance	0.375m
Track Width	2.120m
Lock to lock time	3.00s
Kerb to Kerb Turning Radius	7.000m

DO NOT SCALE

NOTES

GENERAL NOTES

a. THE TOPOGRAPHICAL SURVEY IS BASED ON INFORMATION PRODUCED BY MAPMATIC, DRAWING 3864 0001, DATED 28 OCTOBER 2020.
THE INFORMATION USED IN PREPARATION OF THIS AND ALL OTHER FORE INFRASTRUCTURE DESIGNS AND DRAWINGS IS NOT WARRANTED. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO VERIFY ALL SURVEY INFORMATION PROVIDED AND REPORT ANY ANOMALIES TO FORE CONSULTING.

DESIGN NOTES

1. ALL DESIGN AND WORKS TO COMPLY WITH CURRENT VERSION OF THE FOLLOWING DOCUMENTS:
   - DESIGN MANUAL FOR ROADS AND BRIDGES (DMRB);
   - SPECIFICATION FOR HIGHWAY WORKS (SHW);
   - MANUAL FOR STREETS (MFS); AND
   - KIRKLEES COUNCIL (KC) DESIGN GUIDE AND SPECIFICATION.
2. SWEPT PATH ANALYSIS PERFORMED USING AUTODESK VEHICLE TRACKING 2019 SOFTWARE. TRACKING TAKES INTO ACCOUNT DYNAMIC EFFECT FOR TURNING.

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 02 - EMPLOYMENT
Category : G - PARCEL DISTRIBUTION CENTRES
TOTAL VEHICLES

Selected regions and areas:

01	GREATER LONDON		
	HO	HOUNSLOW	1 days
02	SOUTH EAST		
	SO	SLOUGH	1 days
05	EAST MIDLANDS		
	LN	LINCOLNSHIRE	1 days
	NT	NOTTINGHAMSHIRE	1 days
07	YORKSHIRE & NORTH LINCOLNSHIRE		
	RI	EAST RIDING OF YORKSHIRE	1 days
14	LEINSTER		
	WT	WESTMEATH	1 days
17	ULSTER (NORTHERN IRELAND)		
	AN	ANTRIM	1 days
	DE	DERRY	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area
Actual Range: 1496 to 16000 (units: sqm)
Range Selected by User: 763 to 24154 (units: sqm)

Parking Spaces Range: All Surveys Included

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/11 to 11/05/21

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	1 days
Tuesday	1 days
Wednesday	1 days
Friday	5 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	8 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	1
Edge of Town	5
Free Standing (PPS6 Out of Town)	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Industrial Zone	4
Commercial Zone	3
Development Zone	1

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village,

Secondary Filtering selection:

Use Class:

B8	8 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Filter by Site Operations Breakdown:
All Surveys Included

Population within 500m Range:
All Surveys Included

Population within 1 mile:

1,001 to 5,000	5 days
10,001 to 15,000	1 days
25,001 to 50,000	2 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	3 days
25,001 to 50,000	1 days
125,001 to 250,000	1 days
250,001 to 500,000	2 days
500,001 or More	1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	1 days
1.1 to 1.5	6 days
1.6 to 2.0	1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	2 days
No	6 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	7 days
1b Very poor	1 days

This data displays the number of selected surveys with PTAL Ratings.

Covid-19 Restrictions	Yes	At least one survey within the selected data set was undertaken at a time of Covid-19 restrictions

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

TRIP RATE for Land Use 02 - EMPLOYMENT/G - PARCEL DISTRIBUTION CENTRES

23:00 - 23:30	1	11733	0.051	1	11733	0.102	1	11733	0.153
23:30 - 24:00	1	11733	0.102	1	11733	0.111	1	11733	0.213
Total Rates:			5.836			5.638			11.474

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	1496 - 16000 (units: sqm)
Survey date date range:	01/01/11 - 11/05/21
Number of weekdays (Monday-Friday):	8
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	3
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			1.524			1.499			3.023

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Cliff Hollins Ln / Site Access Junction	T-Junction	Two-way		0.28	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Cliff Hollins Ln east		Major
B	Site Access		Minor
C	Cliff Hollins Ln west		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Cliff Hollins Ln west	7.50			50.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Site Access	One lane	3.00	40	40

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	510	0.087	0.220	0.138	0.314
1	B-C	649	0.093	0.235	-	-
1	C-B	603	0.218	0.218	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Mill Carr Hill Rd / Cliff Hollins Ln	T-Junction	Two-way		0.95	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Mill Carr Hill Rd east		Major
B	Cliff Hollins Ln		Minor
C	Mill Carr Hill Rd west		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Mill Carr Hill Rd west	7.60			0.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B - Cliff Hollins Ln	One lane plus flare	10.00	7.50	5.00	3.50	3.50		2.40	33	31

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	486	0.082	0.208	0.131	0.297
1	B-C	728	0.104	0.262	-	-
1	C-B	574	0.207	0.207	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Bradford Rd / Mill Carr Hill Rd	T-Junction	Two-way		1.82	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Bradford Rd north		Major
B	Mill Carr Hill Rd		Minor
C	Bradford Rd south		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Width for right turn (m)	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Bradford Rd south	7.80		✓	2.20	170.0	✓	2.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B - Mill Carr Hill Rd	One lane plus flare	10.00	8.75	7.50	7.50	7.50		4.60	50	40

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	592	0.099	0.251	0.158	0.359
1	B-C	697	0.098	0.249	-	-
1	C-B	672	0.240	0.240	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.
