Hi, I write again in reference regarding the above planning application. I have looked at the new plans that have been submitted again and nothing appears to have been changed regarding the dormer bedroom extension windows at the back ,which is going up a level and will overlook directly onto my property and my daughters bedroom and our lounge. As we live directly across from the back of the property / bungalow on Wood street .We are not happy about our privacy and the fact that it is going up a level from being a bungalow ,to a first floor house with a big bedroom window directly overlooking the front of our property (bedrooms and lounge). The bedroom window at the back that I have seen on the plans needs to be taken out or have obscured glass ,as it's way too much of an overlook onto our property and also when the original bungalow was built it was built there and allowed as a one story with velux windows ,as it is too close to be two storey. Also it does obstruct the view over the village that we now have of trees and greenery with making it higher at the back. So I object to this planning that has been put in. Once again I am not happy that the glass on the window is not going to be obscured or the windows reduced on the apex of the first floor extension ,as I have written before and seems to be that there is no consideration to this in any of the new planning information. Could you please reply to this email so I know that you have received my objections. Kind regards
