---

Following receipt of your letter dated 27-Oct-2022 Ref: 2021/92603 in connection with the proposed Amazon Storage and Distribution Warehouse, I wish to further object this planning application in the strongest terms.

I stand by my original objection reasonings and would furthermore like to add additional comments to the revised plans.

One of my main concerns is how these plans ever realised the size that is currently in application.

There is no dispute that this piece of land was released from greenbelt and was allocated as employment use, however it was with good reason the local plan published in February 2019 reduced the size of the area to be developed from 24.57 hectares to 10.68 hectares. There has been no justification or accountability for ignoring this and allowing the applicants to proceed with a proposed development that would cover the entire site meaning an additional access point being required (i.e. Whitechapel Road).

As the applicants have been asked numerous times by Kirklees Highways to remove the Whitechapel Road entrance, if they reduced the size of the unit as was originally planned for the land, then only one point of access would be required (i.e. Whitehall Road).

You would find that local residents would be more inclined to consider a proposal of this size as originally planned for the land.

There really should be questioning as to how the amendment at local plan stage was completely ignored and how this proposal is still being considered.

I support Save Our Spen's representation on this planning application as I share its concerns.
