

We live just down the road from this planning application and have done for over 20 years.

Air pollution, Noise pollution, light pollution, extra traffic, House prices to start with....
Why cant brown sites be used that already have derelict buildings

We are concerned about the noise and possible disturbances coming from this site, We already have the noise and air pollution from the motorway and the noise from the nearby pylons. I feel really sorry for the people of Alderstone Rise including our friends who for so many years have looked out onto green space. This will bring down their house price.

The fact that the larger building has an acoustic fence is worrying for all.

We dont need a supermarket or anymore food establishments.

As local people we wont have money to visit the cafe or restaurant. hows it going to benefit us???

There is an ongoing issue in that area of flooding and impermeable ground and run way of water, this is only going to add to the issue.

Yes, we know youre going to plant a few trees but how does that offset the concrete, tarmac, metal and man made structures youre bringing in.

I cant find any information about water conservation, wind power or renewable energys, charging points.

Weve just finished with the massive trucks building the plastic housing estate (legoland).

But, really what does it matter what we think!!!

Youre not going to pay any attention to what we say.

Youre just going to do it anyway.

It doesnt matter how we love where we live and what youre doing to the price our house.

You just want to show youre giving us the choice to object and then ignore it.
