While I think it's going to be a waste of time writing to you here goes anyway. What is going to happen to the on the sites? Is the road going to go through one of them to reach the roundabout on Penistone road? HS2 and HS3 are part of a Wildlife corridor feeding area's for owls, sparrow hawks, foxes and Badgers and lots of other species of birds, bats, butterflies ,moths, insects, amphibians also heron's that visit the dam and kingfishers at the dam and Beldon Brook. Great Spotted Woodpeckers who nest close to the boundary of Lepton Great Wood very near to where you are going to build. All these species will suffer greatly having to move or die off. Lepton Great Wood is suffering now with people going through on motorbikes not wearing helmets you are just going to make the access easier for them and ruin all the green belt around Lepton. Drugs have also been found in the wood. The land would be better turned back into woodland to help the environment and wildlife not some greedy people trying to make money out of the green belt when there are better sites to develop. The area around needs affordable housing throughout Kirklees not big detached house's made of imitation stone on green belt land. Rowley Lane when it rains hard the drains can't take it, the water comes back on its self from the school downwards. Putting more drainage into this system is only going to cause more problems, it only just manages now. The roundabout on Penistone Road will be a bottle neck and is going to need traffic lights to control the traffic, and reduce accidents. The other structures in the area need up grading schools, parking at Rowley lane is terrible they park anywhere block Birch Avenue off and park at the junction between Rowley lane, Birch Ave and, Woodlands. And all down Rowley Lane. The doctors needs improvement and could do with a facility similar to Kirkburton to cope with the increase in people to the area. The land should be returned to the wild for the good of the environment.
