I know this email is very late, but I feel I must share my fears.

When I received the letter dated 15/09/22 from Kirklees, I read it and thought there is no point commenting as every time the neighbourhood has objected to plan from Northorpe Hall Trust, they have been passed anyway. It seems they do not need to adhere to those plans when approved as with the noise caused when hosting a wedding and the parking, blocking the Public Footpath through what used to be a lovely little orchard.

The other day my neighbour sent me a picture of the plans, which alarmed me. The parts that alarmed me are the composting toilet and soak away.

These are directly behind my house and the two adjoining houses. Behind our house are fields rising up the hill and when it rains and the water table is high, our cellars flood. We all have sump pumps and the water is easily dealt with without issue.

If the composting toilet and soakaway is built my fear is that the water that comes into our houses will in effect be sewage, which is an obvious health hazard.

I hope this very late information is taken into consideration and our health is taken seriously.

Yours sincerely,
