Concern about damage to health of trees TP21

We are the residents at 9 Woodsome Drive and would like to address comments that have been provided from the Senior Planning Officer in the Strategic Planning Report, which has been prepared for the meeting on 5th October.

We would have liked to attend the meeting, as we are easily the most affected existing property to the development, but as the date has been given at short notice we are out of the country until the 6th October

8.2 Consultee Response KC Trees. The paragraph confirms that due to the building of Plot 43, there is a chance that the tree TP21, which is in our garden, although won't necessarily be killed, that if anything is undertaken incorrectly, then it may suffer from prolonged deterioration. The tree has been there for over 40 years and is a major feature in our garden, as well as providing some much needed privacy from the close positioning of Plot 43.
