<p>To:</p> <p>Steven Bell C/O East Bierley Cricket Club</p> <p>Nicole Helliwell Kirklees Council Planning Services</p>	<p>Ref: 2023/90576 Date: 22nd March 2023</p>
--	---

Site Location: East Bierley Cricket Club, South View Road, East Bierley, BD4 6PJ
Application: Extensions to Team Room and Changing Rooms

Dear Steve / Nicole

Thank you for your request for consultation for the above outline application. Having read the available information, overall, West Yorkshire Police have no objection to the principle of this application in its current form.

It is requested that in order to avoid a costly and time-consuming **PLANNING CONDITION for Security Measures** being applied to this application, the below advice is requested to be incorporated into the design plans. Details of security measures for the site **MUST** be included within the Design and Access Statement under the heading "**Security Measures**" and will be assessed by a DOCO, **PRIOR** to a Planning Decision.

The below information is intended for the applicant to include in any amendments to the application to maximise the security of the development.

External lighting

All street lighting for both adopted highways and footpaths, private estate roads and footpaths and car parks must comply with BS5489-1:2020 standard. Where conflict with other statutory provisions occurs, such as developments within conservation areas, requirements should be discussed with the local authority lighting engineer.

Landscaping, tree planting and lighting schemes shall not conflict with each other.

The recommended Overall Uniformity of light for a development is expected to achieve a rating of 0.4U_o and should never fall below 0.25U_o. *The evenness of light distribution is almost always more important than the levels of illumination being achieved by the system (the levels are determined by BS 5489-1:2020) The British Standards Institute have issued an advisory note stating that they recommend that U_o be at least 0.25 or 25%. A 0.4 U_o value is the ideal standard for a lighting system, but where technical reasons prevent this, we will still require the very best levels possible and under no circumstances may the rating fall below 0.25U_o.*

The Colour Rendering qualities of lamps used in an SBD development should achieve a minimum of at least 60Ra (60%) on the Colour Rendering Index

It is advised that LED lighting standards are installed to produce downward lighting. This lighting should give a uniform spread of light around the site and not have any large areas of shade or shadow.

The site should provide external lighting such as low energy photoelectric cell or dusk until dawn lighting above all access doors of the building. Any fittings and wiring should be vandal resistant and located within inaccessible positions to deter any criminal attack.

The lighting plan should work in harmony with any CCTV system, which should cover the same locations as mentioned above.

Security measures

Wall construction

Due to the remoteness of some industrial and warehouse units and or reduced activity at night and over the Weekends, some buildings become prone to criminal attack through the wall, bypassing security doors and shutters. The walls should therefore be designed to withstand such attacks and materials resistant to manual attack or damage should be used to ensure the initial provision of security.

Where lightweight construction is being considered, for example the use of insulated sheet cladding, a reinforced lining such as welded steel mesh can enhance the security of the building fabric. Internal plasterboard walling to STS 202 Issue 9: October 2020 BR1 Requirements for burglary resistance of construction products, should also be considered.

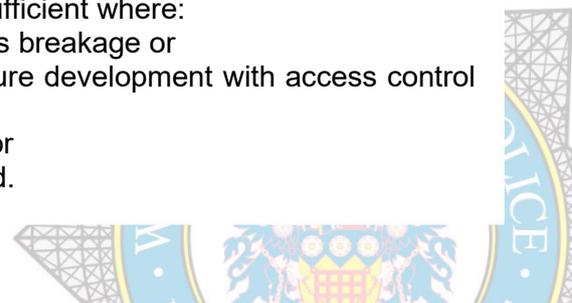

Roller shutters and grilles

Grilles and shutters can provide additional protection to both internal and external doors and windows. The minimum standard for such products, when required, is certificated to:

- LPS 1175: Issue 8.1:2020 Security Rating B10 or above
- STS 202: Issue 10:2021, Burglary Rating 1

For roller shutters, the above minimum-security ratings are generally sufficient where:

- a shutter is required to prevent minor criminal damage and glass breakage or
- the shutter is alarmed, and the building is located within a secure development with access control and security patrols or
- the shutter or grille is intended to prevent access into a recess or
- the door or window to be protected is of a high security standard.

Security ratings higher than the minimum may be required and will be dictated by one or more of the following security considerations

- Type of crime risk
- Level of crime risk
- Location of the building
- Security level of the door or window being protected

External doorset apertures

It is important that the doorset aperture be protected. Due to the nature of some commercial building uses and locations, there is an expectation that the security will be required to meet the following minimum standards when the building is unoccupied:

- LPS 1175: Issue 8.1:2020 Security Rating B10 or above
- STS 201 or STS 202: Issue 10:2021, BR2

Additional security may be gained by utilising additional protection such as a certified roller shutter or grille.

It is expected that all doorset products are fit for purpose and therefore certification to the following material specific standards are also required:

- BS 6510:2010 (Steel)
- BS 7412:2007 (PVCu)
- BS 644:2012 (Timber)
- BS 8529:2017 (Composite)
- BS 4873:2016 (Aluminium)

It is strongly recommended that any doors that include a euro cylinder lock be rated to standards; TS007 3 Star, STS 217, or Sold Secure Diamond Standards. These offer more resistance to this type of attack and will prevent crime. Consult the door supplier to make sure that the PAS24 rating is not affected if locks are upgraded.

Windows

The below are the recommended standards.

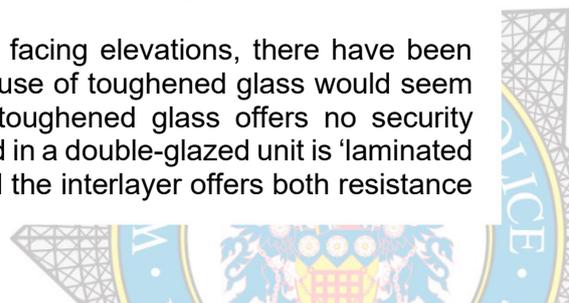

- The new PAS 24:2022 standard; or PAS 24:2016 until September 2024
- STS 202: Issue 10:2021, Burglary Rating 1
- STS 204 Issue 3:2012
- LPS 1175: Issue 8.1:2020 Security Rating B10 or above
- LPS 2081 Issue 1.1:2016 SR A

Ideally laminated glazing should be installed and certificated to BS EN 356 P1A rating, so that if there are any attempts of entry the glass will remain intact.

Security glazing

All ground floor and easily accessible glazing must incorporate one pane of laminated glass to a minimum thickness of 6.4mm or glass successfully tested to BS EN 356:2000 *Glass in building. Security glazing - resistance to manual attack* to category P1A unless it is protected by a roller shutter or grille. With effect from 1st January 2014 the Secured by Design requirement for all laminated glass in commercial premises will be certification to BS EN 356 2000 rating P1A unless it is protected by a roller shutter or grille.

Occasionally, when large laminated glazed panels are used on south facing elevations, there have been incidents of glazing failure (cracking) due to thermal stress. Whilst the use of toughened glass would seem to be a simple solution to the problem of thermal stress, ordinary toughened glass offers no security resistance. It is therefore recommended that the inner pane of glass used in a double-glazed unit is 'laminated toughened'. This combination of the two sheets of toughened glass and the interlayer offers both resistance

to intrusion and thermal stress associated with large, glazed areas. Specifiers are reminded that the minimum requirement for SBD is BS EN 356: 2000 category P1A.

When premises are assessed as being at significant risk to the effects of blast from a terrorist attack, blast resistant glazing or anti shatter film may be required to mitigate the risk of death or injury from the effects of flying glass. Separate information from a West Yorkshire Police Counter Terrorist Security Advisor will give further information on this matter.

CCTV

External warning signs should be installed all around the site stating that there is “MONITORED” CCTV recordings on site.

CCTV is not a universal solution to security problems. It can help deter vandalism or burglary and assist with the identification of offenders once a crime has been committed, but unless it is monitored continuously and appropriately recorded, CCTV will be of limited value in relation to the personal security of staff and visitors. The provision and effective use of CCTV fits well within the overall framework of security management and is most effective when it forms *part* of an overall security plan.

Developers of new commercial premises and managers of existing premises that are considering the use of CCTV must be very clear about the objectives they wish to meet and establish a policy for its use and operation before it is installed. It is important to seek independent advice before approaching an installer and to develop a comprehensive operational requirement for the system, which can be supplied to installers during the tendering process. An operational requirement will be used for the design, performance specification and functionality of the CCTV system. In effect, it is a statement of problems, not solutions and will highlight the areas that must be observed by the system and the times and description of activities giving cause for concern. A useful reference to help achieve this goal is the *Surveillance Camera Code of Practice First Published June 2013 Amended November 2021. Ref: ISBN 978-1-5286-2983-6*

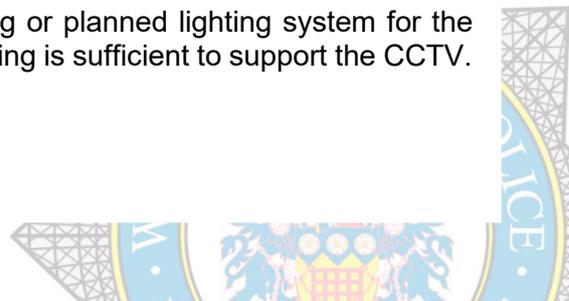

The CCTV system must have a recording capability, using a format that is acceptable to the local police. The recorded images must be of evidential quality if intended for prosecution. Normally this would require a full ‘body shot’ image of a suspect. It is recommended that fixed cameras are deployed at specific locations for the purpose of obtaining such identification shots. An operational requirement must take account of this fact and decisions made as to what locations around the building are suitable for obtaining this detail of image. The recording of vehicle licence plates may also be practical and useful.

Whilst the location of cameras is a site-specific matter it would be normal practice to observe the main entrance to the premises and the reception area. In high crime areas CCTV cameras may need protection within a vandal resistant housing. CCTV coverage is advised of any current areas of the site that are known by the staff to be problematic for criminal offences. Early discussions with an independent expert and potential installers can resolve several matters including:

- Monitoring and recording requirements
- Activation in association with the intruder alarm
- Requirements for observation and facial recognition/identification
- Areas to be monitored and field of view
- Activities to be monitored
- The use of recorded images
- Maintenance of equipment and the management of recording
- Subsequent ongoing training of operatives

CCTV systems must be installed to BS EN 62676-4:2015 Video surveillance systems for use in security applications.

The design of a CCTV system should be co-ordinated with the existing or planned lighting system for the buildings and the external grounds, to ensure that the quality of the lighting is sufficient to support the CCTV.

CCTV systems may have to be registered with the Information Commissioner's Office (ICO) and be compliant with guidelines in respect to Data Protection and Human Rights legislation. Further information is available at this website: www.ico.gov.uk

For guidance on the use of CCTV images as legal evidence see also BS 7958: 2015 *Closed circuit television (CCTV). Management and operation. Code of practice*. This document provides guidance and recommendations for the operation and management of CCTV within a controlled environment where data that may be offered as evidence is received, stored, reviewed, or analysed. It assists owners of CCTV systems to follow best practices in gaining reliable information that may be used as evidence.

Remotely monitored detector activated CCTV systems must be installed in accordance with BS 8418: 2021 *Installation and remote monitoring of detector operated CCTV systems - Code of practice*

Intruder alarms

System designers may wish to specify component products certificated to the following standards: Suitable standards are to BS EN 50131 or PD6662:2017 (wired alarm system) or BS 6799 (wire free alarm system).

Security fogging devices can be incorporated within the intruder alarm system to disorientate the intruder when the alarm system is activated. They must conform to BS EN 50131-8:2009 Security Device Fog Systems.

Secured by Design

https://www.securedbydesign.com/images/downloads/SBD_Commercial_2015_V2.pdf

Applicants are encouraged to apply for *Secured by Design* accreditation for all new developments to achieve a recognised award for security standards. Please see the web link below for further information.

<https://www.securedbydesign.com/services/sbd-awards>

West Yorkshire Police encourages applicants to seek to build / refurbish a development incorporating the guidelines of **Crime Prevention Through Environmental Design (CPTED)**^{1&2}, together with **Secured by Design (SBD)**, a crime prevention initiative operated by the Police Service and supported by the Home Office.

The purpose of SBD is to guide and encourage those engaged in the specification, design and build industry into adopting crime prevention measures. Academic research by Huddersfield University has proven³ that building to SBD standards, reduces the opportunity for crime and the fear of crime as well as creating safer, more secure, and sustainable environments.

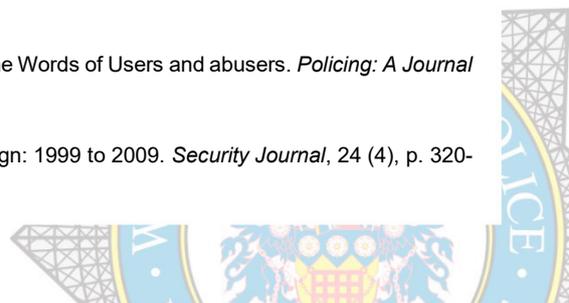

Established in 1989, *Secured by Design* is the title for a group of national police projects focusing on the design and security for new and refurbished homes, commercial premises, and car parks as well as the acknowledgement of quality security products and crime prevention projects. It supports the principles of 'designing out crime' through physical security and processes.

Secured by Design works with the industry and test houses to create high-level security standards responding to trends in crime and has given input on several key standards.

IMPORTANT General information

This advice is based upon concerns following recent current Crime trends in the area concerned. The above advice expressed, is given as a view as to what measures might reduce the risk of crime; there can be no guarantee that the Recommendations / Concerns will prevent Crime.

Before any measures are implemented you are advised to consider current Health and Safety Legislation, Planning Permission and consult with your local **Fire Safety Officer** or any statutory body that may require notification or consultation.

Note – National standards and specifications are often updated, please ensure that the latest version of the security standards and specifications specified in this letter are adhered to.

Policy Guidance

The National Planning Policy Framework (July 2021)

Section 8. Promoting healthy and safe communities

Para 8. Achieving sustainable development means that the planning system has three overarching objectives, which are interdependent and need to be pursued in mutually supportive ways:

(b) a social objective – to support strong, vibrant and healthy communities, by ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations; and by fostering well-designed, beautiful and **safe places**, with accessible services and open spaces that reflect current and future needs and support communities' health, social and cultural well-being.

Para 92. Planning policies and decisions should aim to achieve healthy, inclusive and safe places which:

b) are safe and accessible, so that crime and disorder, and the fear of crime, do not undermine the quality of life or community cohesion – for example through the use of attractive, well-designed, clear and legible pedestrian and cycle routes, and high-quality public space, which encourage the active and continual use of public areas.

Para 97. Planning policies and decisions should promote **public safety** and take into account wider **security and defence** requirements by:

a) anticipating and addressing possible **malicious threats** and natural hazards, especially in locations where large numbers of people are expected to congregate. Policies for relevant areas (such as town centre and regeneration frameworks), and the layout and design of developments, should be informed by the most up-to-date information available from the police and other agencies about the nature of **potential threats** and their implications. This includes appropriate and proportionate steps that can be taken to **reduce vulnerability**, increase resilience and **ensure public safety and security**; and

b) recognising and supporting development required for **operational defence and security purposes** and ensuring that operational sites are not affected adversely by the impact of other development proposed in the area.

Section 11. Making Effective Use of Land

Para 119. Planning policies and decisions should promote an effective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment and ensuring **safe** and healthy living conditions.

Section 12. Achieving well-designed places

Para 130. Planning policies and decisions should ensure that developments:

f) create places that are **safe**, inclusive and accessible and which promote health and well-being, with a high standard of amenity for existing and future users; and where **crime and disorder**, and the **fear of crime**, do not undermine the quality of life or community cohesion and resilience.

Kirklees Local Plan (February 2019)

Policy LP24 supports the above statement and mentions that new developments should incorporate crime prevention measures to achieve:

Section (e). – *“the risk of crime is minimised by enhanced security, and the promotion of well – defined routes, overlooked streets and places, high levels of activity and well –designed security features”*.

Kirklees Supplementary Planning Documents (June 2021)

The applicants are referred to the adopted **Housebuilders Design Guide** and **Open Space Supplementary Planning Documents** (June 2021).

Crime and Disorder Act, 1998

This report is submitted in the interests of crime prevention and addresses our collective responsibilities under:

Section 17 - Duty to consider crime and disorder implications.

- (1) Without prejudice to any other obligation imposed on it, it shall be the duty of each authority to which this section applies to exercise its various functions with due regard to the likely effect of the exercise of those functions on, and the need to do all that it reasonably can to prevent,
 - a) **crime and disorder** in its area (including anti-social and other behaviour adversely affecting the local environment); and
 - b) the misuse of drugs, alcohol and other substances in its area; and
 - c) re-offending in its area.

Summary

Whilst there is no objection in principle to the application, West Yorkshire Police feel that the above recommendations would be beneficial to the security and safety of the site users. Therefore, it is advised that the points raised in this document should be implemented and any re-submitted plans from the applicant to be assessed by a Designing Out Crime Officer prior to a final planning decision.

Yours sincerely

Richard Thornton MSyI
