

Consultation Response from: KC Environmental Health (Pollution & Noise Control)		
2023/91280 - Bromley Farm Quarry, Barnsley Road, Upper Cumberworth, Huddersfield, HD8 8PD		
Quarrying operations for the extraction of clay, shale and incidental coal and subsequent restoration by means of importation of inert wastes		
Date Responded: 21st September 2023	Responding Officer: MN & NH	Responding Ref: WK/202328680
Air Quality We acknowledge the submission of a new Air Quality and Dust Assessment by Miller Goodall (ref:102882) (dated: 17th January 2023) to support the application. This appears to have addressed the reference to Grantham, not Kirklees. However, the content of the report does not appear to have changed. Therefore, our previous comments remain. Whilst we agree in principle with the methodology of the Air Quality and Dust Assessment, we do not agree with the approach taken as it is based an extension to an existing quarry and not a new quarry operation as proposed. Therefore, before the application is determined we require an Air Quality and Dust Assessment that reflects all operations associated with a new quarry, which includes all anticipated daily HGV movements to and from the site. Noise We acknowledge the submission of a revised Noise Assessment by Silkstone Environmental Ltd dated: January 2023 (Revised August 2023) which addresses our queries raised in our previous response re: HGV movements and the use of any mobile crushing plant on site. The report is accepted. <u>Recommendations</u> We acknowledge the submission of new information however this does not address all of the concerns we have raised about the application. New information is required before the application is determined. We recommend that for consistency all new technical reports should specify the same anticipated vehicle movements (including HGVs) and that it is made very clear if these vehicle movements are one-way or two-way.
