The introduction of solar panels in the area will not cause a loss in amenity or light, or producing any significant noise. the area already features a mixture of land uses, with significant tree cover around protecting most.
The fact the there would be a loss of amenity on a footpath is laughable, and the area contains a significant number of other paths they could use.
In addition to all of the above, we have an urgent demand for green energy schemes all around the UK, including New Hall. The fact that free and green electric is held up, or not allowed because a few are not happy with the 'view' is a negligible consideration.
We need to increase and support green renewable energy and this is the ideal opportunity to do so.
