<p>The same issues still arise from the last time there was a planning application. The road is already too busy and used as a rat run and would be extremely dangerous, more so than it already is. The schools in the area are already full, the impact of more homes in a small area is going to have a negative impact on this. On this road there is already two agreed planning applications for flats which is already going to negatively impact the street and surrounding area with extra traffic/parking and intake within schools. Erection of an already sound property which is let to a family meaning their property will be made smaller for the sake of making money at the expense of normal people. The exit/entrance to the suggested planning is not suitable, it's on a bend and dangerous to get out as it would leave a blind spot for people. The suggestion of the water/waste water/amenities will impact on residents of the street due to been privatised and this is not fair or appropriate for residents in the area. The application is the same as the one that was rejected so how come they can keep coming back when it has been rejected by councillors/local community. It's disgraceful that companies like this can try to play the system and leave normal hard working people to suffer the consequences. I hope the councils planning officers have enough about them to see this application for what it is and support the local communities they represent.</p>
