<p>I would be supportive of this proposal which will relocate jobs from the applicants other facilities in the region, if two key issues were addressed.</p> <p>The proposal as outlined does not include any replacement or additional boundary landscaping / planting of tall trees to offset the significant increase in light, noise and air pollution the proposal will bring in its 24 hour operation. Currently with no traffic, the factory machinery noise measures in excess of 70db at our property, with no distribution centre in operation.</p> <p>In addition, I believe the new access and egress in the proposal is sub optimal and based purely on cost efficiency and will negatively impact the local road network in traffic volumes and safety, as shift patterns mirror peak travel times.</p>
