<p>Our property is in direct line to the proposed mast, approximately 50 metres from our back garden. The 20 metre mast will tower over our view.</p> <p>How this new mast, which is right on the edge of Meltham, will serve the rest of the population is questionable. The industrial area in Meltham Mills would surely be a more central location and more fitting with that area?</p> <p>The current mast is generator driven and regularly runs out of power, why can this or a new mast in the same location not be powered by electricity?</p> <p>If the new mast is to be located on Dathan Tools land, could it and associated buildings not be situated on the other side of the factory overlooking the cricket pitch and therefore not have a negative visual impact on the residential area?</p>
