<p>Having done due dilligence prior to purchasing our new home we bought our property knowing it was not near any monstrous telecoms masts. The proposed siting will dominate over the surrounding houses and is an ugly addition to what is a lovely area. As we are on the boundary of metham/helme, surely a more central mast would benefit the village better. We have an industial site at meltham mills where this would not visually impact peoples lives the same as it would placing it directly next to peoples homes. It would be extremely disappointing if planning is passed for the proposed site which is practically in the middle of a number of heavily populated housing estates when an industrial placement is a more suitable option.</p>
