For the Attention of: Ms L. Taylor – Case Officer
Kirklees Council

[By Email: DC.Admin@kirklees.gov.uk]

22 November 2023

Dear Ms Taylor

PLANNING APPLICATION: 2023/62/92795/W

Erection of single storey rear extension and alterations to convert existing dwelling into House of Multiple Occupation (within a Conservation Area) at 37 Upper George Street, Springwood, Huddersfield, HD1 4AW

Thank you for your consultation letter of 2 November 2023 seeking the views of the Coal Authority on the above planning application.

The Coal Authority is a non-departmental public body sponsored by the Department for Energy Security and Net Zero. As a statutory consultee, the Coal Authority has a duty to respond to planning applications and development plans in order to protect the public and the environment in mining areas.

The Coal Authority Response: Material Consideration

The application site falls within the defined Development High Risk Area; therefore within the application site and surrounding area there are coal mining features and hazards which need to be considered in relation to the determination of this planning application.

The Coal Authority's information indicates that the site lies in an area where historic unrecorded underground coal mining is likely to have taken place at shallow depth.

Voids and broken ground associated with such workings can pose a risk of ground instability and may give rise to the emission of mine gases.

The planning application is accompanied by a Coal Mining Risk Assessment report (24 October 2023, prepared by the Coal Authority's commercial arm), which draws upon relevant sources of coal mining and geological information.

The report acknowledges that the site lies in an area of probable shallow coal mine workings, but is able to conclude that any such workings are likely to benefit from sufficient overlying competent cover to ensure surface stability. As such, it advises that the risk to the development from underground coal mining (probable at shallow depths) is low. It goes on to conclude that the risk to the site from mining features is low and advises that an intrusive investigation is not required in this regard.

Mine Gas

It should be noted that wherever coal resources or coal mine features exist there is the potential for mine gases to exist. These risks should always be considered by the LPA. In this particular instance, the submitted report advises the developer to undertake a detailed Gas Risk Assessment.

The Planning & Development Team at the Coal Authority, in its role of statutory consultee in the planning process, only comments on gas issues if our data indicates that gas emissions have been recorded on the site. However, the absence of such a comment should not be interpreted to imply that there are no gas risks present. Whether or not specific emissions have been noted by the Coal Authority, local planning authorities should seek their own technical advice on the gas hazards that may exist, and appropriate measures to be implemented, from technically competent personnel.

The Coal Authority Recommendation to the LPA

The Coal Authority's Planning & Development Team considers that the content and conclusions of the Coal Mining Risk Assessment report are sufficient for the purposes of the planning system and meet the requirements of the NPPF in demonstrating that the application site is safe and stable for the proposed development. We therefore wish to raise **no objection** to the proposed development. However, further more detailed considerations of ground conditions and foundation design may be required as part of any subsequent building regulations application.

Should planning permission be granted for this proposal, we request that the following Informative Notes are included on the decision notice:

1 - Ground Investigations and groundworks

Under the Coal Industry Act 1994 any intrusive activities which disturb or enter any coal seams, coal mine workings or coal mine entries (shafts and adits) require the prior written permission of the Coal Authority since these activities can have serious public health and safety implications. Such activities could include site investigation boreholes, excavations for foundations, piling activities, other ground works and any subsequent treatment of coal mine workings and coal mine entries for ground stability purposes. Failure to obtain permission to enter or disturb our property will result in the potential for court action. Application forms for Coal Authority permission and further guidance can be obtained from The Coal Authority's website at: www.gov.uk/get-a-permit-to-deal-with-a-coal-mine-on-your-property.

2 - Shallow coal seams

In areas where shallow coal seams are present caution should be taken when carrying out any on site burning or heat focused activities.

Please do not hesitate to contact me if you would like to discuss this matter further.

Yours sincerely

James Smith *BSc. (Hons), Dip.URP, MRTPI*
Planning and Development Manager

Disclaimer

The above consultation response is provided by The Coal Authority as a Statutory Consultee and is based upon the latest available data on the date of the response, and electronic consultation records held by The Coal Authority since 1 April 2013. The comments made are also based upon only the information provided to The Coal Authority by the Local Planning Authority and/or has been published on the Council's website for consultation purposes in relation to this specific planning application. The views and conclusions contained in this response may be subject to review and amendment by The Coal Authority if additional or new data/information (such as a revised Coal Mining Risk Assessment) is provided by the Local Planning Authority or the Applicant for consultation purposes.

In formulating this response, The Coal Authority has taken full account of the professional conclusions reached by the competent person who has prepared the Coal Mining Risk

Assessment or other similar report. In the event that any future claim for liability arises in relation to this development The Coal Authority will take full account of the views, conclusions and mitigation previously expressed by the professional advisers for this development in relation to ground conditions and the acceptability of development.
