BASIC TREE REPORT

Mr David Speed
4b Near Bank
Shelley
HD8 8LS

Re: Tree/Ground Report at Above Address, Dated 9th March 2022

Having assessed the ground condition through the root system of the trees in question, there is excessive water flowing through the entire root system of these trees, which are on a steep banking and leaning towards the house. The ground is excessively wet, very soft and loose, showing signs of movement, therefore making these trees unstable. There is a likelihood that they could fail causing damage to property or life.

I would recommend that these trees are to be removed as soon as possible, as the watercourse seems to have shifted, due to road/civil works, carried out on the road above, Huddersfield Road B6116. I have carried out tree/landscape works at this address for Mr Speed for the last 6 years and this water has not been an issue in the past until the past few months.

Please find attached photos for your reference.

Kind Regards,

Michael Pamer.
