

Appendix A – Climate Change Statement

Climate Change Statement for Planning Applications

Part 1: Applicant details

Name of applicant/agent	Mr. P Dyson
Site Address	56, Huddersfield Road Skelmanthorpe HD8 9AS
Description of Development	Rear extension with balcony above.

Part 2: Climate Change Mitigation measures

Please respond to the following questions considering the measures set out in the Climate Change Guidance note:
Q1: What measures have been/will be taken to reduce the energy demand associated with your proposed development beyond the minimum required in Building Regulations? (See section 2)
As well as the 150mm cavity, internal insulation levels will be increased.
Q2: What measures have been/will be taken to limit the carbon consumed through the implementation and construction processes, e.g. by reusing existing on-site materials or sourcing materials locally? (See section 3)
materials are to match existing which will be locally sourced to reduce the carbon footprint.
Q3: What measures have been/will be taken to utilise renewable or low carbon energy sources? (See section 4)

All materials will be low energy where ever practicable.

Q4: What measures have been/will be taken to ensure the building design and layout has been optimised to energy efficiency beyond the minimum requirements in Part L of the Building Regulations ? (See section 5)

Rooms are sectioned off to enable individual temperature controls.

Q5: What measures have been/will be taken to reduce potential impacts of flooding associated with your proposed development? (See section 6)

The house is at the upper end of the street where flooding risks are negligible

Q6: What measures have been/will be taken to reduce water stress associated with your proposed development? (e.g. Water retention and minimisation measures) (See sections 7 and 8)

Soak away for rainwater to reduce stress on mains water.

Q7: What measures have been/will be taken to provide biodiversity net gains? (See section 8)

n/a

Q8: What measures have been/will be taken to reduce air pollution associated with your proposed development? (See section 9)

the above measures will help to reduce heating costs and therefore emissions.
