

6 Share Hill

Response to queries.

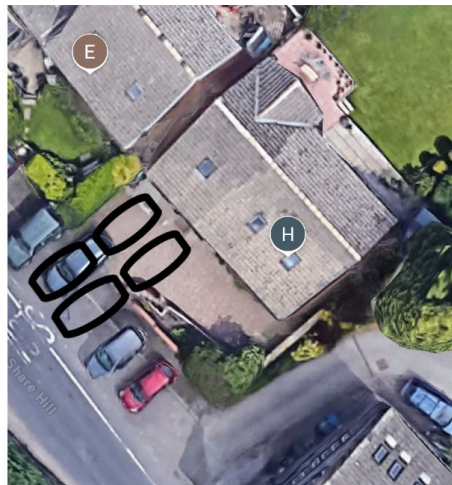

Parking and number of bedrooms

The purpose of this conversion is not to add additional bedrooms, the property currently already has four bedrooms, but to add an office and an additional bathroom and most importantly the headspace to be able to use the rooms more comfortably.

The front of the house already has parking for 4 vehicles as per this image, you can see from later images that there are currently some temporary veg beds where cars could be parked, but these can easily be removed should parking be required.

However, we are also currently waiting for a quote to change the parking so that we will have additional, more usable space for parking as per this image. Technically this would then allow for us to park 5 vehicles on our property.

Impact on Heritage Buildings

You can see from the image looking down our property at the heritage property adjacent, that the property, 6 Share Hill, is set back from these houses, so the proposed conversion will not block any light or affect any visibility of the heritage buildings.

Also, although I can't show this, the path of the sun will also cast no shadow on this property.
