

**Consultation Response from KC,
Ecology Unit**

2024/90192 59b, Whitcliffe Road, Cleckheaton, BD19 3BX

Erection of extension and alterations to attached garage to create dwelling forming annex accommodation associated with 59b, Whitcliffe Road, Cleckheaton, BD19 3BX and erection of porch to existing dwelling

Date Responded: 19/02/2024

Responding Officer: Gareth Hey

Responding Ref:

Assessment

No ecological information has been submitted along with the application; therefore, the assessment of the ecological impacts is based on the limited information available. The site is located within the bat alert zone. Therefore, as the surrounding area provides suitability for bats and the proposals include for works to the structure of the buildings, there is a reasonable likelihood of disturbance to roosting bats.

The government circular on Biodiversity and Geological Conservation (ODPM, 2005) and explanatory note from Natural England (Natural England, 2020) indicates that information of protected species, and in particular European protected species (including bats), should be made available prior to determination.

Advice to planning officer

The applicant should engage with a suitably qualified ecologist to undertake a daytime inspection for bats (also known as a Preliminary Roost Assessment or Bat Scoping Survey). In many cases this will be adequate to determine whether bats are likely to be affected. If the survey indicates that further activity surveys are required to determine the presence/likely absence of bats, this information should also be supplied. Bat activity surveys should be carried out between May and August and in accordance with Bat Conservation Trust guidelines (Collins, 2023).

The application should not be determined prior to obtaining survey information regarding bats.
