**Date Responded: 12/08/2024.**

**Responding Officer: Martin Stephenson**

**Responding Ref: 2**

**Previous response by the LLFA**

Dated 04/04/2024 for application 2024/90357

**Documents reviewed by the LLFA:**

Hafren Water:

- Document Ref: 3531/FRA, FRA & SW Drainage Strategy, Version F2 dated 24/07/2024.

**Drainage Summary:**

As noted in this and the previous version of the FRA, the proposed method of disposal of surface water on the site following the restoration works and infiltration will be aided by the use of swales.

The LLFA therefore concludes that the proposed works will still not increase flood risk and therefore has no objections to the scheme.

**Kirklees Flood Management and Drainage as the Lead Local Flood Authority, SUPPORTS this application and has no recommended drainage conditions.**
